General Information

General Notes

1. Always read and understand all **Shurjoint** installation instructions before installing any **Shurjoint** product.
2. Always depressurize and drain the piping system before attempting disassembly, adjustment or removal of any piping components.
3. Designers must know and understand all relevant building and or piping standards, codes and specifications. It is the responsibility of the designer to select and or specify the appropriate product for the intended use and service.
4. Always refer to the maximum pressure rating and service temperature range allowed for **Shurjoint** products and ensure that they are used within these parameters.
5. Special attention is required for selection of suitable gasket grades for the intended service application.
6. All information and data contained herein supersede all previous published data. **Shurjoint** reserves the right to change product designs and or specifications without notice and or obligation. Please refer to the **Shurjoint** web site for the latest information.

SHURJOINT

A World Leader in Mechanical Piping Components

Mechanical couplings were first developed in the 1920's and evolved into Grooved Mechanical Couplings during the 1950's & 60's. This revolution was further spurred in the latter half of the 20th century by advanced engineering and innovative materials such as Ductile Iron and EPDM elastomers.

Past to Present The history of **Shurjoint** dates back to 1974, when the founders produced their first grooved couplings. These first couplings were produced from malleable iron, the casting material of choice at this time. Before long foundry production was converted to ductile iron. Ductile iron was the ideal material, providing for precision castings and superior strength, without the need for further heat treatment. EPDM (ethylene propylene diene monomer) provided a great advancement in synthetic rubber elastomer compounds. This new compound offered a service life equal to or in some cases longer than that of carbon steel pipe. EPDM was an ideal gasket material for grooved piping systems.

A World Leader With over four decades of experience, **Shurjoint** is recognized as a world leader in the design and manufacture of mechanical piping components. **Shurjoint** has developed and currently offers over 3000 individual piping components in sizes from ½" to 104", for use with a variety of piping materials including carbon steel, stainless steel, ductile iron, PVC, HDPE, CPVC and copper tubing.

The Shurjoint Mission Our mission is to supply the highest quality products to customers worldwide with an unmatched level of customer service at a superior value. In addition to these hallmarks, **Shurjoint** continuously invests in research, engineering and development, resulting in innovative products and new solutions for the changing needs of industry.

The Shurjoint Catalog This catalog features our general product offering. For the latest and most complete listing of products, news and additional information please visit our website www.shurjoint.com or contact our Customer Service Representative.

Typical Applications

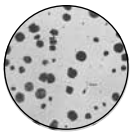
HVAC	Reverse Osmosis
Fire Protection	Desalination
Water Supply & Treatment	Mining & Tunnel Boring
Plumbing	Marine
Municipal	Gas
Food Processing	Chemical
Pulp & Paper	Oil
Agriculture	Air

Taipei 101, 509.2M, the world tallest building 2004 - 2010

Ductile Iron – Housing Material

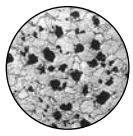
Ductile iron is an ideal material for grooved mechanical components, as it provides similar or greater strength to that of wrought or cast steel piping materials such as; forged steel flanges - ASTM A105, carbon steel valves - ASTM A216 WCB, wrought carbon steel pipe - ASTM A53 Gr. B, etc. Most ***Shurjoint*** *components are made of ductile iron conforming to ASTM A536 Gr. 65-45-12 and or ASTM A395 Gr. 65-45-15.*

Ductile iron was first invented in the U.S.A. and U.K. in the late 1940's. Superior strength was achieved by crystallizing graphite in the shape of nodules. The result was ductile iron that had tensile and yield strength properties that were equal to or greater than some steel castings. This superior strength combined with ductile irons excellent castability helped to reduce the weight and cost of many components. Because of these advantages and benefits, many components have been converted from gray iron, malleable iron and steel castings to ductile iron over the past 60 years. Please visit the Ductile Iron Society website; www.ductile.org, for further information.



Ductile Iron
Superior tensile strength with good castability

Gray Iron
Excellent castability but 'brittle' – less strength



Malleable Iron
Stronger than gray iron but poor castability

Microstructure check

International ductile iron specifications equivalent to ASTM A536 Gr. 65-45-12 and or ASTM A395 Gr. 65-45-15 are;

SAE J434: D4512
EN1563: EN-GJS-450-10 or EN-GJS-450-15
JIS G5502: FCD450-10
SABS 936/937: SG42

Physical strength of materials comparative

	ASTM Designation	Tensile Strength, min. psi (MPa)	Yield Strength, min. psi (MPa)	Elongation in 2", %
Ductile iron castings	A536: Gr. 65-45-12	65,000 (448)	45,000 (310)	12
Ductile iron castings	A395: Gr. 65-45-15	65,000 (448)	45,000 (310)	15
Forged carbon steel	A105	70,000 (485)	40,000 (250)	20
Cast carbon steel	A216: WCB	70,000 (485)	36,000 (205)	22
Carbon steel pipe	A53: Gr. B	60,000 (415)	35,000 (240)	(29.5)
Malleable iron castings	A47: Gr. 32510	51,000 (345)	32,000 (224)	10
Gray iron castings	A126: Gr. B	31,000 (214)	Not specified	Not specified

ASTM A536, Grade 65-45-12 (UNS F33100)

Bolts & Nuts

Carbon steel bolts and nuts

Shurjoint products utilize oval neck track bolts conforming to ASTM A449 or ASTM A183 Gr. 2 and heavy duty nuts to ASTM A563 Gr. B, available with UNC threads or ISO metric threads. The UNC track bolts and nuts are supplied electro zinc plated in a silver chromate color and ISO metric bolts and nuts in a gold chromate color. Hot-dip galvanized bolts and nuts are also available upon request.

A stainless steel bolt fastened with a silicon bronze nut

ASTM A449, Quenched and Tempered Steel Bolts*

Chemical Requirements	Minimum	Maximum
Carbon, %	0.28	0.55
Manganese, %	0.60

Yield strength, psi (MPa)	20,000 (140)	
Elongation, %	11	12

Recommended Bolt Torque Range

Always use factory supplied bolts and nuts for assembly of **Shurjoint** couplings. Shown below are the general recommended torque ranges for common sizes of carbon steel bolts. Never exceed the recommended torque range by more than 25% as excessive torque can lead to joint failure, personal injury and or property damage. Always depressurize and drain the piping system before attempting disassembly, adjustment or removal of any piping component. Follow installation instructions for proper assembly of all **Shurjoint** components. For questions contact **Shurjoint**.

Bolt Size		Proper Torque Range	
mm	in	Nm	Lbs-Ft
M10	⅜"	40-55	30-40
M12	½"	120-140	90-105
M16	⅝"	135-175	100-130
M20	¾"	200-270	150-200
M22	⅞"	240-300	180-220
M24	1"	270-305	200-225
-	1⅛"	-	225-275

For stainless steel bolts, reduce by 20%

Rubber Gasket Compounds

The 20th century was the era of innovation in plastic and rubber materials. Among the new synthetic rubber compounds that most impacted our industry were EPDM (ethylene propylene diene monomer) and Nitrile rubbers.

Please refer to the Gasket Selection Guide beginning on page 196 for additional information relating to service temperatures and chemical resistance.

EPDM is recognized as the most water resistant rubber available today. Good for cold & hot water up to 230ºF (110ºC), waste water, water with acid, deionized water and seawater. EPDM is not recommended for use with petroleum based oils and fuels, hydrocarbon solvents and aromatic hydrocarbons.

Green Stripe
Grade "E"

Violet Stripe
Grade "Lube-E"

Shurjoint Grade "E" EPDM is compounded per ASTM D2000 designation 2CA615A25B24F17Z. Peroxide curing and post curing give a higher crosslink density, which provides a higher aging resistance than required in AWWA C606.

	AWWA C606 2CA615A25B24F17Z	Shurjoint Standard
Basic Requirements		
Hardness, Durometer A, point	65±7	60±5
Tensile strength, psi, min.	1500 psi (10.34 MPa)	1500 psi (10.34 MPa)
Elongation, %, min.	300 %	300 %
Heat Aging Properties	After aged at 212°F (100°C) for 70 hours	After aged at 257°F (125°C) for 70 hours
Change in Durometer hardness, max.	+10 point	+5 points
Change in tensile strength, max.	-25%	-10%
Change in ultimate elongation, max.	-25%	-20%
Compression Set, Method B, max.	25%	20%

Use **Shurjoint** Grade "E-pw" for potable water and food processing services. The Grade "E-pw" is UL classified per NSF/ANSI 61 and NSF/ANSI 372 for cold +86°F (30°C) and hot +180°F (82°C) potable water services. EPDM seals are recommended for use in breweries as they have the least impact on the characteristics of beer or wort.

Double Green
Stripe

Note: EPDM materials used in domestic water applications with high levels of chlorine and or chloramines should be subjected to resistance testing, as not all materials will be suitable. EPDM materials with higher saturated ethylene content and lower carbon black content are recommended for chloramine and chlorine resistance. Contact **Shurjoint** for further information.

Laboratory high temperature oven testing

Laboratory hot water testing

NBR, Buna-N, and Nitrile

Orange Stripe

all represent the same copolymer of butadiene and acrylonitrile (ACN), which is inherently resistant to hydraulic fluids, lubricating oils, transmission fluids and other non-polar petroleum based products and water less than 150° F (65° C). The higher the ACN content, the higher the resistance to oils and heat, but the lower elastic characteristics and compression set. NBR displays poor resistance to hot water and steam.

Shurjoint grade "T" NBR rubber is compounded based on ASTM D2000 designation 5BG615A14B24Z and exceeds the requirements of AWWA C606. Grade "T" is a general purpose compound with a medium ACN level. For fuels, especially those with a low aniline point, such as premium or unleaded gasoline, ASTM referenced fuels B & C and naphtha, use **Shurjoint** grade "M2" Epichloro-Hydrin or grade "O" Flurocarbon.

	AWWA C606 5BG615A14B24Z	Shurjoint Standard
Basic Requirements		
Hardness, Durometer A, point	60±7	60±5
Tensile strength, psi, min.	1500 psi (10.34 MPa)	1500 psi (10.34 MPa)
Elongation, %, min.	300 %	300 %
When heat aged at 212°F (100°C) for 70 hours		
Change in Durometer hardness, max.	+10 point	±10 points
Change in tensile strength, max.	-25%	-20%
Change in ultimate elongation, max.	-30%	-30%
Compression Set, Method B, max.	25%	25%

White Gasket

Use **Shurjoint** Grade "A" white Nitrile gaskets for oily and greasy food products and processing, as well as pharmaceutical and cosmetics manufacturing. The Grade "A" is compounded from FDA approved ingredients (CFR Title 21 Part 177.2600).

Red Stripe

Use **Shurjoint** Grade "S" Nitrile gaskets for joints with AWWA ductile iron pipe. Good for mineral oils, vegetable oils, air with oil vapors and water less than 150°F (65°C).

Silicone (VMQ)

Red Gasket

Shurjoint Grade "L" Silicone compound features high temperature range stability and low temperature flexibility. Recommended for dry heat and air without hydrocarbons up to 350°F (177°C). Silicone compounds are used in many food and medical applications as they do not impart odor or taste. Not recommended for hot water or steam services.

Chloroprene (CR, Neoprene)

Yellow Stripe

Shurjoint Grade "V" chloroprene rubber is a general purpose elastomer that demonstrates good resistance to lubricating oils, animal & vegetable fats and greases. Chloroprene is not effective in aromatic and oxygenated solvent environments and is not recommended for hot water and steam services.

Fluorocarbon (FKM)

Blue Stripe

FKM is a highly fluorinated carbon backboned compound and offers excellent resistance to harsh chemical and ozone attack with a thermal stability to 300°F (149°C). **Shurjoint** Grade "O" fluorocarbon gasket is recommended for use with oils, gasoline, hydraulic fluids, hydrocarbon solvents and extended fuels that fall outside the service parameters of grade T / NBR compounds. Not recommended for steam services.

Epichloro-Hydrin (ECO)

White Stripe

Shurjoint Grade "M2" compound offers good to excellent resistance to aliphatic hydrocarbon and aromatic hydrocarbon fuels at low temperatures, LP gases & fuels, mineral oils and many solvents. ECO offers limited resistance to many organic chemicals.

Halogenated Butyl (CIIR)

Brown Stripe

Shurjoint Grade "M" CIIR is specially compounded for use with AWWA ductile iron pipe for water services, mild dilute acids, oil-free air and many chemicals. The compound is UL classified for potable water use per NSF/ANSI 61 and NSF/ANSI 372.

Data Chart Notes

Nominal Size	Pipe O.D.	Max. Working Pressure (CWP)	Max. End Load (CWP)	Axial Displacement	Angular Movement		Dimensions			Bolt Size	Bolt Torque	Weight
					Degree Per Coupling	Pipe	A	B	C			
in	in	PSI	Lbs	in	(°)	ft / in	in	in	in	in	Lbs-Ft	Lbs
mm	mm	Bar	kN	in / mm		mm / m	mm	mm	mm		Nm	Kgs
1	2	3	4	5	6		7			8	9	10

1. **Nominal Size: Shurjoint** couplings and fittings are identified by the nominal IPS pipe size in inches or nominal diameter of pipe (DN) in millimeters. Refer to the chart on the next page which shows a comparison between typical metric and IPS pipe sizes

2. **Pipe O.D.:** Actual outside diameter of pipe in inches and millimeters.

3. **Maximum Working Pressure (CWP):** Maximum working pressures listed are CWP (cold water pressure) or maximum allowed working pressure within the service temperature range of the gasket used in the coupling, based on standard wall or sch. 40 steel pipe, cut or roll-grooved to ANSI/AWWA C606 (latest edition) specifications and tested to ASTM F1476. Burst test pressures are minimum 3 times the maximum working pressures unless otherwise specified.
   These ratings may occasionally differ from maximum working pressures listed and/or approved by UL, ULC, and/or FM as testing conditions and test pipes differ. For performance data on other pipe schedules contact **Shurjoint**.

   Note: For one time field test only the maximum joint working pressure may be increased 1½ times the figures shown.

4. **Maximum End Load:** Maximum end loads listed are total of internal and external forces to which the joint can be subjected, based on standard wall or sch. 40 steel pipe, cut or roll-grooved to ANSI/AWWA C606 (latest edition) specifications.

5. **Axial Displacement:** Designed range of the gap between pipe ends based on roll grooved pipe.

6. **Angular Movement (Deflection):** Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 – 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

   Maximum allowable deflection of pipe from centerline when the joint is used with cut or roll-grooved steel pipe under no internal pressure.

7. **Dimensions:** "A", "B", "C" and so on are external dimensions for reference purpose only in inches and millimeters.

8. **Bolt Size:** UNC bolt size and length in inches and ISO metric bolt size and length in millimeters with numbers of bolts where applicable.

9. **Bolt Torque:** Recommended bolt fastening torque in Nm and Lbs-Ft.

10. **Weight:** Weight of a coupling complete with gasket, bolts and nuts or of a fitting in kilograms and pounds.

Nominal Size / Pipe O.D.

While **Shurjoint** fittings are normally identified by the nominal size, always check the actual O.D. of the pipe and fittings to be connected, as in some markets it is customary to refer to different O.D. pipes with the same nominal size.
For example: The nominal size 65 (2½") is referred to 73.0 mm (2.875") pipe O.D. in IPS and 76.1 mm (3.000") pipe O.D. in BS, ISO or JIS pipes. Refer to pipe & tubing standards for details.

Pipe & Tubing Standards
(ANSI) American National Standards Institute B36.10 & B36.19
(API) American Petroleum Institute API 5L
(ASTM) American Society of Testing and Materials A135, A795 & B88
(BS) British Standards BS1387, BS3600, BS3601 & BS3605
(ISO) International Standard Organization 65 & 4200
(JIS) Japan Industrial Standard G3452 & G3459

Global Pipe Size Designations

Shurjoint product data & technical data are identified by the nominal IPS pipe size in inches or nominal diameter of pipe (DN) in millimeters.

The following chart shows a comparison between typical IPS size and metric (DIN) sizes.

Nominal Size		Outside Diameter (O.D.)								
Inches	DN	mm	DIN	BS	ISO	JIS	ANSI	GB	India

		630.0 mm China	–	–	–	–	–	630.0 mm	–	–

Important Note:

Nominal designations are used where the actual O.D. of the pipe matches the ANSI size.

Otherwise both the nominal and actual O.D. are listed.

China sizes are listed as actual O.D. in mm.

** China sizes are tubing sizes.

Specifications, Standards, Codes and Organizations

Shurjoint production facilities are certified to ISO 9001. Products are designed to conform and meet or exceed all applicable domestic and international standards and are listed, approved and or certified by various approval bodies and registration authorities. **Shurjoint** is also active in industry and environmental organizations.

Grooved Mechanical Couplings, Flange Adapters & Mechanical Tees

Shurjoint Grooved Mechanical Couplings

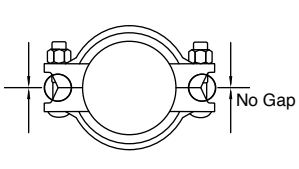
*The **Shurjoint** grooved piping system is one of the most advanced, versatile, economical and reliable systems available today. After the pipe ends are grooved a gasket is mounted over the pipe ends. The coupling segments are then placed over the gasket and the bolts and nuts are fastened resulting in a secure and leak free joint.*

A coupling can be installed 3 – 4 times faster than a comparable welded or brazed joint and there is no need for a flame or welding torch on the job site. A grooved mechanical coupling can be installed by fastening a pair of bolts and nuts while using only a wrench or spanner, whereas a comparable flanged joint requires the fastening of many bolts and nuts with a pair of wrenches. The grooved system allows for easy material take-offs and unlike a threaded system, there is no need to allow for added pipe length for thread engagement. With removal of just a few bolts one can easily access the system for cleaning, maintenance, changes and or system expansion.

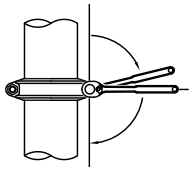
Helpful Information to Ensure Proper Assembly

Some couplings and components require the housing bolt pads to make metal-to-metal contact for proper assembly, while others require a specific bolt torque while maintaining equal bolt pad gaps. The icons and information below will help to identify those items to ensure proper assembly. Read and follow all installation instructions for the component being installed.

Metal-to-metal contact: Tighten bolts and nuts until bolt pads make metal-to-metal contact. After metal-to-metal contact is achieved, tighten nuts by another one quarter or one half turn to make sure the bolts and nuts are snug and secure. No torque wrench is required. Excessive torque may lead to bolt or joint failure.

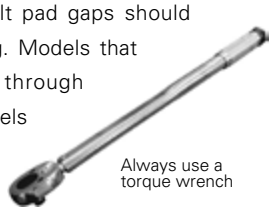


Metal-to-metal contact

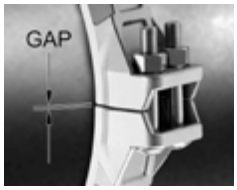


After metal-to-metal, further tighten one quarter or half turn

Torque required! Bolts and nuts must always be tightened to the required torque by using a torque wrench. Normally there will be some gaps seen between the bolt pads after the bolts and nuts are fully tightened. Bolt pad gaps should be equal on both sides of the coupling. Models that require torque tightening include 2" through 4" of model XH-1000, all sizes of models XH-70EP, SS-7X and 79 couplings.



Always use a torque wrench



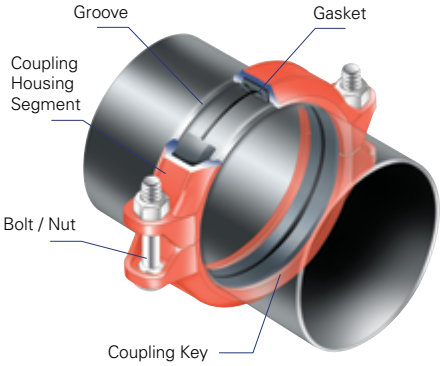
#SS-7X 10" ~ 24"

#79 2" ~ 20"

Rigid & Flexible Couplings

Grooved mechanical couplings (GMC) are available in both rigid and flexible models. A rigid coupling is used in applications where a rigid joint is desired, similar to that of a traditional flanged, welded, and or threaded connection. To be considered rigid, a coupling would allow less than one degree of deflection or angular movement.

Flexible couplings are designed to accommodate axial displacement, rotation and a minimum one degree of angular movement. Flexible couplings are used in applications that call for curved or deflected layouts and or when systems are exposed to outside forces beyond normal static conditions, such as seismic events or where vibration and or noise attenuation are a concern.

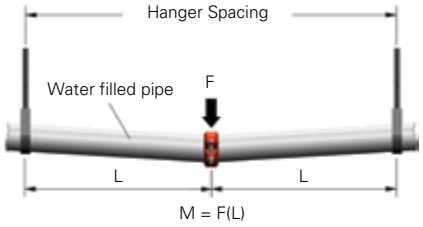


#7705 Flexible Coupling

Grooved couplings become less flexible as the pipe size increases. For sizes in excess of 18" (450 mm) couplings are very limited in their angular movement. Please refer to the following definition and test methods.

Definition Grooved couplings are subjected to internal pressures and exterior bending forces during service. ASTM F1476-07 defines a rigid coupling as a joint where there is essentially no available free angular or axial pipe movement and a flexible coupling as a joint wherein there is available limited angular and axial pipe movement.

Bending Moment Test bending moments are calculated by the equation M = F (L), where F is weight of water filled pipe (Lbs) and L is hanger spacing x 1/2 (feet). The table below shows test bending moments calculated using sch. 40 pipe with NFPA 13 hanger spacing.

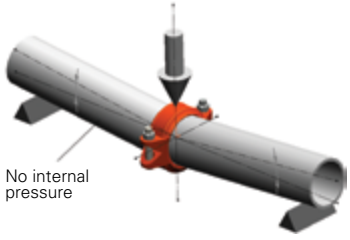


Test Bending Moment (ASTM F1476)

Nom. Size (inches)	Moment Nm	Moment Lbs-Ft
1½	549	405
2	780	575
2½	1200	885
3	1645	1213
4	2471	1823
5	3551	2619
6	4803	3543
8	7663	5652
10	11379	8393
12	15558	11475
14	18609	13725
16	24299	17922

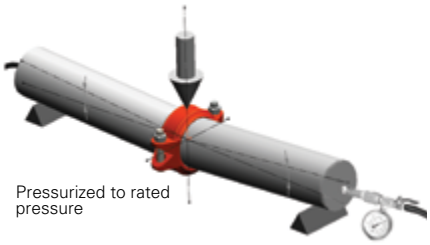
Flexibility Proof Test Flexibility proof testing is conducted by applying a small bending moment, 10% of the listed moment, to the test assembly with no internal pressure. A 4" model 7705 or 7707 flexible coupling deflects 3 – 4 degrees depending on the type of groove processed.

M = 10% listed moment



Rigidity Proof Test Rigidity proof testing is conducted by applying 25% of the listed moment to the test assembly which is internally pressurized to the rated pressure.

M= 25% listed moment



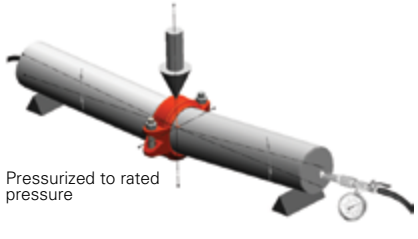
The rigid coupling shall pass the test when the angle has not changed more than angle θ. θ shall be calculated as follows: θ° = 60' (minutes) – [2' (minutes) x (nominal pipe size in inches)]. In other words, when θ is less than 1 degree (60 minutes), the grooved mechanical coupling is verified as a rigid coupling and when θ is more than 1 degree (60 minutes), the GMC is regarded as a flexible coupling. The maximum angles θ for rigid couplings are shown in the table below:

Rigid Coupling - Max. Deflection

Nom. Size (inches)	θ, max (minutes)	θ, max. (degrees)
1½	57	0.95
2	56	0.93
2½	55	0.92
3	54	0.90
4	52	0.87
5	50	0.83
6	48	0.80
8	44	0.73
10	40	0.67
12	36	0.60
14	32	0.53
16	28	0.47

Bending Moment Proof Test The coupling shall resist a 100% listed bending moment while the assembly is internally pressurized to the rated pressure.

M = 100% listed moment



Model

Z05 Rigid Coupling

- Angle-Pad Design

The **Shurjoint** Model Z05 is an angle-pad design rigid coupling for moderate pressure piping services including fire mains, long straight runs and valve connections. The angle-pad design allows the coupling housings to slide along the bolt pads when tightened. The result is an offset clamping action which provides a rigid joint which resists so-called 'snaking' of a long straight run. Support and hanging requirements correspond to ANSI B31.1, B31.9 and NFPA 13.

With the removal of only one bolt you can make a fast and easy 'swing-over' installation.

The angle pad design allows for fast and easy swing-over installation with the removal of a single bolt.

* Working Pressure is based on roll grooved standard wall carbon steel pipe.

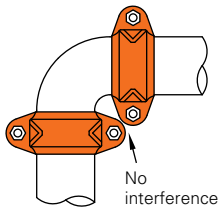
† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

Model

K-9 Rigid Coupling

- T & G Design

The **Shurjoint** Model K-9 is a T&G (tongue & groove) design rigid coupling for moderate pressure applications where rigidity is required including valve connections, mechanical rooms, fire mains and long straight runs. The built-in teeth and T&G mechanism firmly grasp the pipe ends to eliminate undesired flex. Support and hanging requirements correspond to ANSI B31.1, B31.9 and NFPA 13.



No need to worry about bolt pad interference as the Model K-9 works well with both regular and short-radius elbows and tees.

All DIN size K-9 couplings up to DN150 size and the DN200 K-9H coupling are VdS approved in addition to cULus and FM approvls.
** Working Pressure is based on roll grooved standard wall carbon steel pipe.

Model

Z07 Heavy Duty Rigid Coupling

The **Shurjoint** Model Z07 is an angle-pad design rigid coupling for general piping applications where rigidity is required including, mechanical rooms, valve connections fire mains and long straight runs. The angle-pad design allows the coupling housings to slide along the bolt pads when tightened. The result is an offset clamping action which provides a rigid joint that resists flexural and torsional loads. Support and hanging requirements correspond to ANSI B31.1, B31.9 and NFPA 13.

* Working Pressure is based on roll grooved standard wall carbon steel pipe.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.

SHURJOINT®

Model

7771 Standard Rigid Coupling

- T & G Design

The **Shurjoint** Model 7771 is a T&G (tongue & groove) design standard rigid coupling for general piping applications where rigidity is required including valve connections, mechanical rooms, fire mains and long straight runs. The T&G mechanism provides a rigid, locked-in connection that resists flexural and torsional loads. Support and hanging requirements correspond to ANSI B31.1, B31.9 and NFPA 13.

Model

XH-1000 Extra Heavy Rigid Coupling

The **Shurjoint** Model XH-1000 is an extra heavy rigid coupling designed for high pressure services up to 1000 psi (70 Bar). This coupling is painted orange and is supplied with a standard C-shaped gasket and heavy duty bolts and nuts. The Model XH-1000 can be installed on standard roll or cut grooved pipes or components. Sizes 2" through 4" require a bolt torque of 60 - 70 Lbs-Ft. with some bolt gaps. For sizes 6" and above, the bolt pads will make metal to metal contact when properly installed with no torque wrench required.

* Working Pressure is based on roll grooved standard wall carbon steel pipe. Stated pressure ratings have been developed with a safety factor. Please see Shurjoint's 2017 online installation instructions for most recently updated instructions. Proper installation is important to proper performance

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.

Sizes 2" through 4" require a bolt torque of 60 – 70 Lbs-Ft (80 – 95 Nm). Normally you can see some gaps between the bolt pads. Bolt pad gaps should be equal on both sides of the coupling.

Sizes 6" through 12" are designed to make a metal-to-metal contact when properly installed.

Model

7705 Flexible Coupling

The **Shurjoint** Model 7705 is a standard flexible coupling designed for use in a variety of moderate pressure general piping applications. The Model 7705 coupling features flexibility that can accommodate misalignment, distortion, thermal stress, vibration, noise and seismic tremors. The Model 7705 can even accommodate an arced or curved piping layout. See Typical Applications - Flexible Couplings on page 191.

All DIN size 7705 couplings up to DN150 size and the DN200 7705H coupling are VdS approved in addition to cULus and FM approvals.

* Working Pressure is based on roll grooved standard wall carbon steel pipe.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions. **

** Deflection or angular movement given is the maximum value that a coupling allows. When using the given maximum angles for a curved layout, proper bracing should be used to counter pressure thrust that will occur when the system is pressurized. Flexible couplings can be used for angular movement and or thermal expansion, though please note individual coupling(s) cannot be used to their maximums for both types of movement within a system at the same time.

Model

7707 Heavy Duty Flexible Coupling

The **Shurjoint** Model 7707 heavy duty flexible coupling is designed for use in a variety of general piping applications of moderate or high pressure services. Working pressure is usually dictated by the wall thickness and rating of the pipe being used. The Model 7707 couplings feature flexibility that can accommodate misalignment, distortion, thermal stress, vibration, noise and seismic tremors. The Model 7707 can even accommodate an arced or curved piping layout. See Typical Applications - Flexible Couplings on page 191.

** Working Pressure is based on roll grooved standard wall carbon steel pipe.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.

‡ Deflection or angular movement given is the maximum value that a coupling allows. When using the given maximum angles for a curved layout, proper bracing should be used to counter pressure thrust that will occur when the system is pressurized. Flexible couplings can be used for angular movement and or thermal expansion, though please note individual coupling(s) cannot be used to their maximums for both types of movement within a system at the same time.

* Non-standard/stock items may require longer lead time.

SHURJOINT®

Model
7707N Flexible Coupling

The **Shurjoint** Model 7707N is a two-segment, flexible coupling for use with standard pipe, roll or cut grooved to AWWA C606 specifications. For 26", see page 189 for groove dimensions.

Model

7707L Large Diameter Coupling

The **Shurjoint** Model 7707L large diameter couplings in sizes 28" - 42" (700 mm - 1050 mm) are designed for joining large diameter IPS pipe that can be roll grooved. All couplings feature a six to eight segment design, incorporating two bolts at each segment joint to ensure a positive connection and seal.

Model

7706 Reducing Coupling

The **Shurjoint** Model 7706 reducing coupling allows for direct reduction on a piping run and eliminates the need for a concentric reducer and additional couplings.

The specially designed rubber gasket helps prevent small pipe from telescoping into larger pipe during vertical assembly.

Caution: The Model 7706 couplings must not be used with an end cap, as the end cap could be sucked into the pipe by the vacuum created when a system is being drained.

* Working Pressure is based on roll- or cut-grooved standard wall carbon steel pipe.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.

** Deflection or angular movement given is the maximum value that a coupling allows. When using the given maximum angles for a curved layout, proper bracing should be used to counter pressure thrust that will occur when the system is pressurized. Flexible couplings can be used for angular movement and or thermal expansion, though please note individual coupling(s) cannot be used to their maximums for both types of movement within a system at the same time.

Model

G28 Hinged Lever Coupling

The Model G28 Hinged Lever Coupling is designed for quick connect and disconnect services. The housing segments are hinged with a locking lever handle for easy assembly. The use of the split pin can secure and prevent the accidental opening of the coupling.

* Working pressure is based on roll grooved standard wall carbon steel pipe.
† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.
** Deflection or angular movement given is the maximum value that a coupling allows. When using the given maximum angles for a curved layout, proper bracing should be used to counter pressure thrust that will occur when the system is pressurized. Flexible couplings can be used for angular movement and or thermal expansion, though please note individual coupling(s) cannot be used to their maximums for both types of movement within a system at the same time.

Expansion Pipe

Lever handles are factory assembled tight for safety. The use of an expansion pipe will aid the easy opening and closing. Expansion pipes are available upon request.

Model

C-7 Outlet Coupling

The Model C-7 Outlet Coupling combines the features of a coupling and a reducing outlet. The C-7 facilitates an easy reducing branch outlet without the need of a mechanical tee or reducing tee and couplings. The C-7 is available with grooved, male threaded or female threaded outlets. This fitting is recommended for fire sprinkler and other pipelines of moderate pressure. The C-7 Outlet Coupling can be used for dry pipe systems or vacuum services up to 10 inHg or 254 mmHg, which may occur when the system is drained.

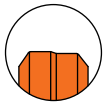
	73.0 x 76.1	35	9.09	0 ~ 1.6		11	102	138	48	M10 x 55	1.2
6 x 165.1 mm	6.625 x 6.500	400	9940	0 ~ 0.125	0° - 33′	0.12	7.87	10.63	2.09	⅝ x 3½	7.7
	168.3 x 165.1	28	42.80	0 ~ 3.2		10	200	270	53	M16 x 90	3.5

* Working Pressure is based on roll grooved standard wall carbon steel pipe.
† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.
**Deflection or angular movement given is the maximum value that a coupling allows. When using the given maximum angles for a curved layout, proper bracing should be used to counter pressure thrust that will occur when the system is pressurized. Flexible couplings can be used for angular movement and or thermal expansion, though please note individual coupling(s) cannot be used to their maximums for both types of movement within a system at the same time.

Model
7771-T Transition Coupling

The **Shurjoint** Model 7771-T Transition Coupling allows for a direct transition from IPS pipe sizes to JIS pipe sizes. Available in nominal pipe sizes from 8" through 12" this coupling can accommodate a combination of pipes, valves and or fittings with a single coupling. Bolt pads are designed to make metal to metal contact to provide for a secure and rigid joint.

The stepped exterior design of the housings help to ensure the correct positioning of IPS and JIS sides.



Stepped design

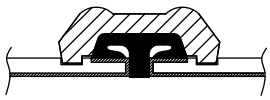
For 6" (168.3) x 6" (165.1), see Model 7706-T.
* Working Pressure is based on roll- or cut-grooved standard wall carbon steel pipe.
† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾" - 3½"; 25% for 4" and larger to compensate for jobsite conditions.

SHURJOINT®

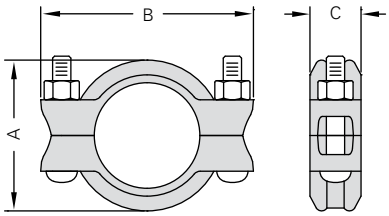
Model

XH-70EP Extra Heavy Rigid Coupling with End Protection (EP) Gasket

The Model XH-70EP is designed for use with plastic coated or cement lined pipe. The EP (end protection) gasket serves to form a continuous lined surface at the joint and also helps protect the pipe ends from corrosion. This coupling is rated up to 2500 psi (175 Bar) when used in conjunction with machined EP cut grooves and the applicable pipe.



EP Gasket



CAUTION: Always fasten the bolts to the required torque.

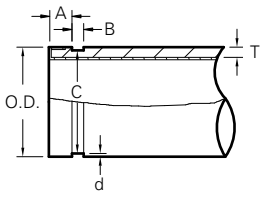
* Pressures quoted are based on EP cut grooved XS (Sch. 80) pipe.

"EP" End Protection Cut Groove Specification

for XH-70EP Coupling (IPS sizes)



1. EP cut-grooves are for plastic coated or cement lined pipe to be connected with **Shurjoint** XH-70EP couplings only. Do not roll groove pipe, which can damage the coating or lining and or create flared pipe ends.
2. Always use plain-end square cut pipe. Do not use beveled end pipe.
3. Always use an EP gasket with a XH-70EP coupling. Do not use a standard gasket.
4. The gasket seating area shall be free from deep scores, marks, or ridges that could prevent a positive seal.

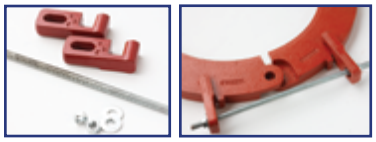
7041N 14" ~ 24"
(With a draw kit)

Flange adapters 2" through 12" are supplied hinged as a single assembly while 14" through 24" (7041N) are supplied with two independent segments and a draw kit.

Always use factory–supplied bolts and nuts to assemble flange segments. The use of other bolts may cause joint failure. If the factory supplied bolts cannot be used for the component that is being connected consult Shurjoint technical services for further guidance.



14" – 24": Supplied with a draw kit

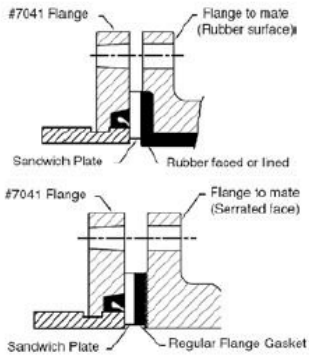
Models 7041 / 7043 Flange Adapters

Important Notes

CAUTION

Important Notes:

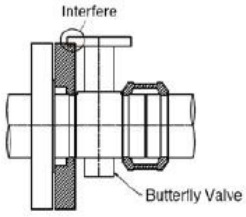
1. The Model 7041 flange adapter requires a hard flat face for effective sealing. Sealing surface D is the maximum inside face requirement, sealing surface E is the minimum outside face requirement. If the mating flange face is outside these dimensions, a flange gasket and model 49 sandwich plate (Model #49, see cut sheet #V-03) must be used. With the serrated faces of some valves or rubber-faced wafer valves, the mating surface might also be inadequate and a sandwich plate must be used.



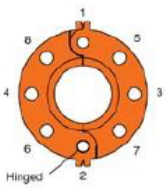
2. The Model 7041 flange adapter has small triangular teeth inside the key shoulder to prevent the pipe from rotating. These teeth should be removed when being connected to schedule 5 pipe, plastic pipe or components or surfaces that could be damaged by these teeth.

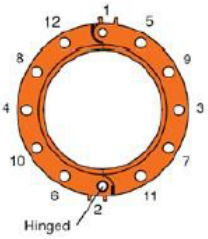
3. The Models 7041 flange adapter shall not be used as anchor points for tie-rods across non-restrained joints.

4. When assembling a Model 7041 flange adapter against a butterfly valve or ball valve, make sure that the outside diameter of the flange adapters does not interfere with the valve actuator or the mounting pad of the actuator.



5. Bolt tightening sequence: Like a regular flange joint, it is important to make flange faces contact parallel. Tighten nuts alternately in the sequence of diagonally opposite pairs as shown below until the flange faces meet and make a metal-to-metal contact. When using two model 7041 flange adapters to mate pipe, or wafer / lug valves, the hinge point locations must be staggered 90° to each other, a model 49 sandwich plate must be used where appropriate, and flange adapter segment housings must remain parallel during nut tightening sequence.





Model
7041 Flange Adapter - ANSI Class 125/150

The **Shurjoint** Model 7041 flange adapters 2" through 12" are supplied hinged as a single assembly, while 14" - 24" (7041N) are supplied with two independent segments and a draw kit.

Model
49 Sandwich Plate

The Model 7041 and 7043 flange adapters require a hard flat surface for effective gasket sealing. A sandwich plate is required and should always be used when the mating surface is not adequate as with the serrated faces of some valves or the rubber-faced or rubber-lined flange adapters of a wafer valve.

Material: Mild-steel, electro-zinc plated. Stainless steel, type 304 or 316 is available on request.

Note: 2" - 6" flange drilling to PN10 / PN16 and 8" and above to PN16. See below for required bolt torque.
* Working Pressure is based on roll grooved standard wall carbon steel pipe.

Required bolt torque

The tables show standard torque values for proper assembly of **Shurjoint** flange adapters. Use a torque wrench so that all the nuts are tightened equally with the same torque value. **Shurjoint** flange adapters are sealed with elastic (rubber) gaskets, which require much lower torques than those that utilize metallic gaskets.

Required Torque for Model 7041 Flange Adapters (ANSI Class 125 / 150, BS 10-E)

Nominal Size inch	Bolt		Required Torque	
	Size inch	No.	Lbs-Ft	Nm
2	⅝	4	110 ~ 140	149 ~ 190
2½	⅝	4	110 ~ 140	149 ~ 190

Model

7180 Universal Flange Adapter

The Model 7180 Universal Flange Adapter provides a rigid transition from a flanged component to a grooved system. The single unit is compatible for a range of flange types including ANSI Class 125/150, PN10, PN16, and JIS 10K.

Model

7181 Universal Reducing Flange Adapter

The Model 7181 Universal Reducing Flange Adapter provides a rigid transition between a flanged piping system and a one or two-size reduced grooved system without the need of a concentric reducer. The flange drilling is compatible to ANSI 125/150, PN10/16, BS-10E and JIS 10K.

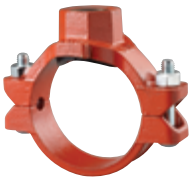
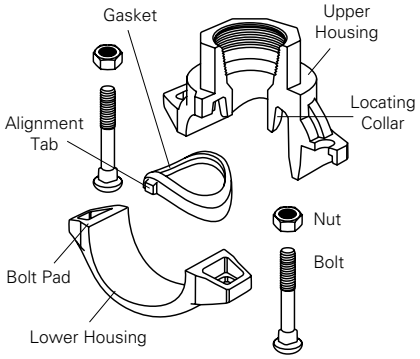
Mechanical Tees

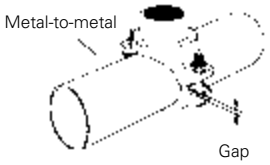
***Shurjoint** mechanical tees provide a fast and easy mid-point branch outlet, eliminating the need for welding or the use of multiple fittings.*

The Model M21 features a female threaded outlet and M22 features a grooved end outlet. Model 7721 (female threaded outlet) and 7722 (grooved end outlet) are available in 8" sizes. The Model 723 Saddle-let features a compact-design for making direct connections to sprinkler heads, drop nipples and or gauges.





When bolts are tightened with a proper torque, the outlet housing makes metal to metal contact with the outer surface of the pipe.

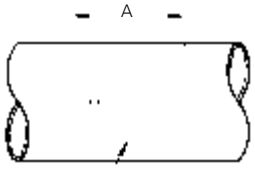


It is normal to see bolt pad gaps, though they should be equal on both sides of the mechanical tee.

The hole must be cleanly cut using the correct size hole-saw and shall have a smooth edge. Never use a torch for cutting a hole.

Hole-cutting

The hole-cut method of pipe preparation is required when using mechanical tees, mechanical crosses, and saddle-lets. The method of pipe preparation requires the cutting or drilling of a specified hole size on the centerline of the pipe.



⅝" (16 mm)

Always use the correct hole saw size as shown in each data chart and never use a torch for cutting a hole. After the hole has been cut all rough edges must be removed and the area within ⅝" (16 mm) of the hole should be inspected to ensure a clean smooth surface, free of any indentations or projections that could affect proper gasket sealing. The area within the "A" dimension should also be inspected and must be free of dirt, scale or any imperfection that could affect proper seating or assembly of the fitting.

Hole Size: The hole sizes are dictated by the branch size of the mechanical tee. Refer to product data chart.

Ridgid Model No. HC-300
Hole Cutting Tool

Model

7721 Mechanical Tee Female Threaded Outlet

The Model 7721 & M21 Mechanical Tees provide a fast and easy mid-pipe threaded branch outlet. The 7721 & M21 eliminate the need for welding or multiple fittings. The mechanical tee utilizes ductile iron housings, a grade E moulded gasket and heat-treated carbon steel track bolts and nuts. UL/FM working pressure of Model 7721 rated to 300 psi (20 Bar).

∓ Hole diameters listed are suggested hole diameters.
‡ T: Take-Out (Center of run to end of pipe to be engaged.)
[ ] Important: Make special note of the hole saw size and maximum diameter allowed on these sizes, deviation could lead to joint failure.
* Non-standard/stock items may require longer lead time.
**Working pressure is based on standard wall carbon steel pipe.

Model

7722 Mechanical Tee Grooved-End Outlet

The Model 7722 Mechanical Tee provides a fast and easy mid-pipe threaded branch outlet. The mechanical tee utilizes ductile iron housings, a grade E gasket and heat-treated carbon steel track bolts and nuts. Housings are painted orange or red, or as an option can be supplied hot dipped zinc galvanized or epoxy coated. Maximum working pressure: 300 psi (20 Bar). Gaskets are interchangeable between Models 7721 & 7722.

∓ Hole diameters listed are suggested hole diameters.
* Non-standard/stock items may require longer lead time.
**Working pressure is based on roll- or cut-grooved standard wall carbon steel pipe.

Model

M22 Mechanical Tee Grooved-End Outlet

The groove dimensions conform to AWWA C606. UL/FM working pressure is 300 psi (20 Bar).

∓ Hole diameters listed are suggested hole diameters.
[ ] Important: Make special note of the hole saw size and maximum diameter allowed on these sizes, deviation could lead to joint failure.
* Non-standard/stock items may require longer lead time.
**Working pressure is based on grooved standard wall carbon steel pipe.

Model
723 Saddle-Let

The Model 723 Saddle-Let is the ideal outlet fitting for making direct connections to sprinkler heads, drop nipples and or gauges. No need for welding, just cut or drill a hole at the desired outlet location.

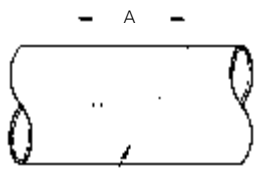
∓ Hole diameters listed are suggested hole saw diameters.
‡ T: Take-out (Center of run to end of pipe to be engaged)
* Working Pressure is based on standard wall carbon steel pipe.

Hole Cutting

The method of pipe preparation requires the cutting or drilling of a specified hole size on the centerline of the pipe. Always use the correct hole saw size as shown in the table and never use a torch for cutting a hole. After the hole has been cut all rough edges must be removed and the area within ⅝" (16 mm) of the hole should be inspected to ensure a clean smooth surface, free of any indentations or projections that could affect proper gasket sealing.

Hole Sizes for 723 Saddle-let

Saddle- Let Branch Size	Hole Dimensions		Surface Preparation "A"
	Hole Saw Size	Max dia. Allowed	
in	in	in	in
mm	mm	mm	mm
½, ¾, 1	1 3/16	1¼	3½
15, 20, 25	30	32	89



⅝" (16 mm)

Pressure Performance Data

Ductile Iron Couplings on Carbon Steel & Stainless Steel Pipe

The following tables show maximum working pressures (CWP) of **Shurjoint** ductile iron couplings and flange adapters used on both carbon steel and stainless steel pipes. **Shurjoint** ductile iron couplings can be used in conjunction with stainless steel pipe in non–corrosive environment as the flow media does not come in direct contact with the coupling housings but rather only the gasket. Stated pressure ratings have been developed with a safety factor. Please see Shurjoint' s 2017 online installation instructions for most recently updated instructions. Proper installation is important to proper performance.

Cast & Wrought Grooved Fittings

Shurjoint Grooved Fittings

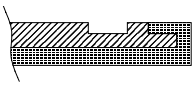
Shurjoint *offers a wide range of grooved-end fittings in sizes through 24" (600 mm). Fittings are available in a number of styles and configurations to support a variety of applications.* ***Shurjoint*** *grooved-end fittings are manufactured and designed to meet ASTM F1548 and ANSI/AWWA C606 requirements for use with grooved mechanical couplings conforming to ASTM F1476. For sizes not specified in these standards, please refer to applicable groove specifications shown in this catalog.*

Most fittings are provided in ductile iron conforming to ASTM A536 Gr. 65-45-12 and or ASTM A395 Gr. 65-45-15. Some styles and sizes larger than 14" (350 mm) are fabricated from carbon steel pipe to ASTM A53 Gr. B or fabricated of segmentally welded steel of the same or equivalent grade. Fittings are painted orange or red, or as an option can be supplied hot-dip galvanized or epoxy coated.

Rubber Lined Fittings

Shurjoint ductile iron grooved end fittings are also available with rubber lining for abrasive services. Contact **Shurjoint** for further information.

For abrasive services



For abrasive and corrosive services

The values listed in this table express the frictional resistance of representative Shurjoint fittings as equivalent feet (meters) of straight pipe. For the branch of a tee that is reduced in size, use the value that corresponds to the branch size. For example, the branch value of a 4" x 4" x 3" tee is 12.0 feet (3.7 meters). For fittings not listed in this table, the equivalent length of straight pipe can be estimated from the data provided. For example, the flow resistance of a 22½° elbow is approximately one half that of a 45° elbow.

Model

7110 90° Elbow
7111 45° Elbow
7112 22½° Elbow
7113 11¼° Elbow

Shurjoint ductile iron grooved-end fittings are made of ductile iron per ASTM A536 Gr. 65-45-12 and or ASTM A395 Gr. 65-45-15. C-E dimensions are manufacturer's standard. See page 72 for wrought steel grooved-end fittings.

Model

7150 Concentric Reducer
7151 Eccentric Reducer

Shurjoint ductile iron grooved-end fittings are made of ductile iron per ASTM A536 Gr. 65-45-12 and or ASTM A395 Gr. 65-45-15. E-E dimensions are manufacturer's standard. See page 74 for wrought steel grooved-end fittings.

Model
7160T Transition Cap

The **Shurjoint** Model 7160T is an ideal transition fitting when a large reduction is required and can be used in place of more costly reducers or swaged nipples. In addition the 7160T can serve as a drain fitting.

Model

7160H Domed End Cap

The **Shurjoint** Model 7160H end caps are cast of ductile iron and are designed to withstand pressure evenly over the entire spherical surface. The Model 7160H End Cap is designed for use on 10" - 24" mechanical piping applications.

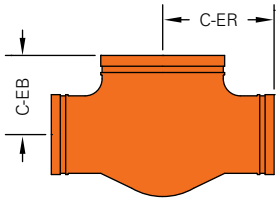
SHURJOINT®

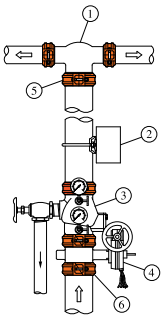
Model

7125 Bullhead Tee

The **Shurjoint** Model 7125 is a grooved-end bullhead tee, specifically designed for use on fire protection systems. The 7125 allows you to directly split the flow into two reduced branch lines without the need for concentric reducers and multiple couplings.



Fire Protection Applications



1. 7125 Bullhead Tee
2. Waterflow Indicator
3. RCV Riser Check Valve With Trim Kit
4. SJ-300F Butterfly Valve
5. 7707/7705 Flexible Couplings
6. Z07/7771 Rigid Couplings

Model
899 End-All Fitting

The **Shurjoint** Model 899 End-All fitting is a unique domed end cap fitting available with a ½", ¾" or 1" NPT or BSP threaded outlet. Designed as an end of line fitting, the End-All features two multi-function bosses which can be used for the direct connection of sprinkler heads, sprigs, drops, drains and or gauges.

Sprinkler Hubs

The **Shurjoint** Sprinkler Hubs are grooved-end manifold fittings with a number of threaded outlets to accommodate flexible sprinkler hoses. The Sprinkler Hubs can also be used in combination with flexible sprinkler hoses and traditional hard piping depending on your requirements. These fittings work as a hub for multiple flexible hoses and or hard pipe runs, thus reducing the number or headers, drop nipples and fittings required. All outlets are 1" NPT or BSPT. Maximum working pressure is 300 psi (20 Bar, 2.0 MPa) CWP. cULus listed and FM approved. The C-E dimensions conform to ANSI B16.3 Class 150.

Wrought Long Radius Elbows (Bends)

1. Long radius 90° elbows 3D, 5D, and 6D in sizes up to and including 4" are provided with 4" (102 mm) long tangents, sizes 5" to 10" are provided with 1D long tangents and sizes 12" to 24" are provided with 12" (305 mm) long tangents.
2. End Preparation: Roll-grooved to AWWA C606-04 and or ISO/FDIS 6182-12. For dimensional tolerances of cast fittings, refer to ISO/FDIS 6182-12 Table 3.
   - Plain-end, beveled end or cut-grooved ends are also available upon request.
3. Material: Standard wall steel pipe to ASTM A53, Grade B. Other materials also available on request.
4. C to E tolerances: 2" through 6" ±⅛" (3.2 mm); 8" through 16" ±¼" (6.4 mm); 18" through 24" ±⅜" (9.5 mm).
5. All weights are approximate, based on calculated weight of pipe.

Extra Heavy Cut Grooved Fittings "EP" (End Protection)

Model

10EP 90° EP Elbow
11EP 45° EP Elbow
20EP EP Tee
35EP EP Cross

Shurjoint offers a variety of fittings with extra heavy (Sch. 80) wall thickness and "EP" cut grooves available for use with XH-70EP couplings. These fittings must be used with XH-70EP couplings in high pressure systems where the system pressure exceeds the published ratings for XH-1000 or Model 7707 couplings.

For "EP" cut-grooves, see page 30.

*Non-standard/stock items may require longer lead time.

Model

22EP Header Tee

The **Shurjoint** Model 22EP Header Tees are specifically designed for use in oilfield production headers where the top (test) line is 2" (50 mm) and the bottom production line is 3" (80 mm) or 4" (100 mm).

Section 3

Stainless Steel Series

Stainless Steel Series

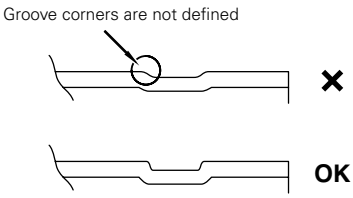
***Shurjoint** offers a full range of stainless steel grooved mechanical couplings in CF8 (304) and CF8M (316) for general service applications and in specialty alloys for applications including reverse osmosis and desalination systems. Grooved fittings are available in sizes from 1" (25 mm) to 24" (600 mm) produced in a combination of investment castings and wrought stainless.*

Pressure ratings of stainless steel couplings

The design pressure rating of **Shurjoint** stainless steel grooved couplings follows Class 150 and is based on roll grooved Sch. 10S pipe. Pressure ratings will vary depending on the type of pipe used and grooves processed. See page 101 Performance Data Sheet for pressure ratings (CWP) when used with other pipe schedules and cut-grooved pipe.

Shurjoint ductile iron couplings can be used in conjunction with stainless steel pipe, depending on the application, as the flow media does not come in direct contact with coupling housings but rather only the gasket. See page 47 for performance data.

Stainless steel pipe in general is more difficult to groove than carbon steel pipe, as it is more difficult to achieve defined groove corners on stainless pipe. Grooves that are not defined and have too much of a radius could result in joint failure. Care must be taken to process grooves as defined as possible. For this reason, roll-groove machine manufacturers offer a variety of roll sets depending on the pipe material and wall thickness being grooved. Always select the correct roll set for the pipe being grooved.



If the same roll-set that has been used for carbon steel pipe is used on stainless steel pipe, rust or scale may be transferred to the stainless steel pipe during processing of the groove. Thus we recommend the use of a separate roll set specifically for use with stainless steel pipe. Also use caution to keep roll grooved stainless steel pipe dry prior to installation.

SS-5 Stainless Steel Rigid Coupling

- Angle-Pad Design -

The **Shurjoint** Model SS-5 is an angle-pad design stainless steel coupling for use with Sch. 5S, Sch. 10S or Sch. 40S stainless steel pipe where a rigid connection is desired. The angle-pad design allows the coupling housings to slide along the bolt pads when tightened. The result is an offset clamping action which provides a rigid joint which resists so called 'snaking' of a long straight run. With the removal of only one bolt you can make a fast and easy "swing-over" installation. The SS-5 couplings are comprised of two identical CF8 (304) or CF8M (316) housing segments, EPDM gaskets and stainless steel track bolts and heavy duty nuts.

The **Shurjoint** Model SS-5 is available with a standard "C" shaped or *GapSeal* gasket in a variety of grades to meet your specific service requirements.

**The working pressure shown is based on roll-grooved Sch. 40S pipe. For other pipe schedules and cut-grooved pipe, see page 101.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

Model

SS-7 Stainless Steel Rigid Coupling

The Model SS-7 is a tongue and groove rigid coupling designed for a variety of moderate service pressure applications. The SS-7 is supplied standard in CF8 (304) and CF8M (316) with 304 and 316 bolts and nuts.
SS-7 couplings should always be installed so that the coupling bolt pads make metal to metal contact.

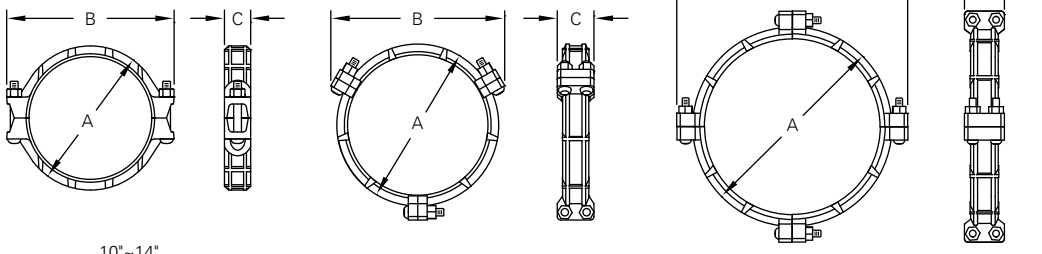
* The working pressure shown is based on roll-grooved Sch. 40S pipe. For other pipe schedules, see page 101.
† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

The tongue and groove style rigid coupling may allow for rotation when installed on deeper than specified grooves.

Model

SS-7X Stainless Steel Rigid Coupling

The Model SS-7X is a tongue and groove rigid coupling designed to provide a rigid joint for stainless steel pipe in sizes 10" through 24". The SS-7X is supplied standard in CF8 (304) and CF8M (316) with 304 and 316 bolts and nuts. The bolts must be fastened to the required torque for proper installation.



10"~14" 16"~18" 20"~24"

Model

SS-8X Stainless Steel Heavy Duty Flexible Coupling

The Model SS-8X is designed for high pressure applications including reverse osmosis and desalination systems. The SS-8X is available in stainless steel 304, stainless steel 316, Duplex CD3MN (2205), Super Duplex CE8MN, CE3MN (2507) and 6-Moly stainless steel CK3MCuN (254SMO*). The SS-8X features 316 bolts, washers and Silicon Bronze nuts to help prevent galling during repetitive use.

The SS-8X is also available in CF8M (316) with 316 bolts and nuts. Contact **Shurjoint** for details.

* 254SMO is a registered trademark of AvestaPolarit AB.

Working pressure ratings are based upon generally accepted pressure piping design standards and testing in accordance with ASME Section VIII Division 1 pressure vessel test methods.

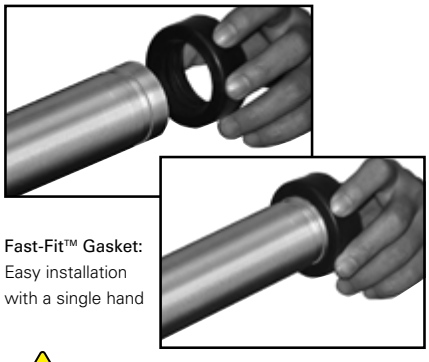
* Non-standard/stock items may require longer lead time.

** The working pressure shown is based on cut-grooved Sch. 40S or 80S pipe only. Burst test pressures are minimum 2 times the maximum working pressures.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

The **Shurjoint** Fast-fit™ gasket has been designed and engineered for easier and faster installations. The pipe-end friendly design eliminates struggling to stretch the gasket over the pipe ends and the Fast-fit™ gasket also features **Shurjoint**'s Gap-Seal technology, which seals the gap between the pipe ends and eliminates stagnant water pockets within the gasket cavity. The Fast-fit™ gasket is UL classified in accordance with NSF/ANSI 61 and NSF/ANSI 372 for potable water (Cold Water +86°F / 30°C and Hot Water +180°F / +82°C).

Always use the factory supplied **Shurjoint** Fast-fit™ gasket. Performance standards do not support the use of a standard gasket in the SS-1200 coupling.



Fast-Fit™ Gasket: Easy installation with a single hand

Always use the **Shurjoint** Fast-fit™ gasket. Do not use a standard gasket with the SS-1200 coupling.

Model

SS-28 Stainless Steel Hinged Lever Coupling

The Model SS-28 Hinged Grooved Coupling is designed for quick connect and disconnect services. The housing segments are hinged with a lever handle for easy assembly. Use of the split pin can prevent the accidental opening of the coupling. The Model SS-28 can be used in a wide variety of applications with standard roll- or cut-grooved pipe. Housings 1½"- 4" (40 mm - 100 mm) feature a smooth outer surface, housings 5"- 12" (125 mm - 300 mm) feature a cross-ribbed design for added strength.

Standard gasket: Grade "E" EPDM or Grade "T" Nitrile.

Available standard in CF8 (304) or CF8M (316).

** The working pressure shown is based on roll-grooved Sch. 40S pipe. For other pipe schedules and cut-grooved pipe, see page 102.

† Allowable Axial Displacement and Angular Movement (deflection) figures are for roll grooved standard steel pipe. Values for cut grooved pipe will be double that of roll grooved. These values are maximums; for design and installation purposes these figures should be reduced by: 50% for ¾"/DN20 - 3½"/DN90; 25% for 4"/DN100 and larger to compensate for jobsite conditions.

* Non-standard/stock items may require longer lead time.

Expansion Pipe

Lever handles are factory assembled tight for safety. The use of an expansion pipe will aid the easy opening and closing. Expansion pipes are available upon request.

SHURJOINT®

Cast Grooved Fittings

Model

SS-10 90° Elbow SS-20 Tee
SS-11 45° Elbow SS-60 Cap

The **Shurjoint** Model SS-10, SS-11, SS-20 and SS-60 stainless steel grooved fittings are investment cast in sizes 1" - 12". These fittings are supplied in ASTM A351 or A743 austenitic grades CF8 (304) and CF8M (316). Materials are in compliance with NSF/ANSI 372 for potable water service applications. In addition fittings are also available on request in CF3M (316L), 316Ti, 2205 Duplex, 2507 Super Duplex and ASTM CK-3MCuN (UNS J93245) the cast equivalent to 254SMO* to meet your specific service requirements.

All cast fittings feature full flow characteristics and are designed to the same C - E dimensions of standard ductile iron grooved fittings.

* 254SMO is a registered trademark of AvestaPolarit AB.

SS-41 Flange Adapter - ANSI 125/150

The Model SS-41 stainless steel flange adapter allows for a direct connection with ANSI Class 125/150 flanges. The SS-41 is investment cast in Gr. CF8 (304) or CF8M (316). Integral closure tabs located on the flange O.D. help facilitate alignment and assembly.

Model

SS-80 Stainless Steel Universal Flange Adapter

The Model SS-80 Universal Flange Adapter provides for a rigid transition between a grooved piping system and a flanged piping system or component. The SS-80 can mate to ANSI 125/150, PN 10/16, BS-10E or JIS 10K, and is available standard in CF8 (304) or CF8M (316).

SHURJOINT®

Model

SS-723 Stainless Steel Mechanical Tee

The **Shurjoint** Model SS-723 stainless steel mechanical tee is the ideal fitting for branch or direct outlet connections to sprinkler heads, drop nipples and or gauges on stainless steel pipe. No need for welding, simply cut or drill a hole at the desired location, position the housing so that the locating collar fits within the hole and secure with the bolts and nuts.

Model

SS-726 Stainless Steel Y-Strainer

The Model SS-726 Stainless Steel Grooved-end Y-Strainers are designed to strain debris and foreign matter from piping systems and thus provide inexpensive protection for costly pumps, meters and other components. Cleaning and maintenance of the screen can be accomplished easily by removing the coupling. The Model SS-726 Stainless Steel Y-Strainer is suitable for vertical or horizontal installations.

150	168.3	20	470	357	219	25	39.0

* Working pressure is based on connection with roll- or cut-grooved standard wall stainless steel pipe.

Model
SJ-600L Ball Valve

The Model SJ-600L is a two-piece, full-port stainless steel ball valve rated at 600 psi (42 Bar) and is available in CF8M (316). The SJ-600L features a floating ball for lower torque and is supplied with a lever handle as well as ISO mounting holes to accommodate a full range of gear or power actuators.

* Working pressure is for connection with cut- or roll-grooved schedule Sch. 40S pipe.
‡ For the first opening or closing of the valve when the valve is not continuously operated, an additional torque of 2.0 – 2.5 times the listed operating torque is normally required.
^ The weight includes the lever handle.

Model
SJ-600W Ball Valve

The Model SJ-600W is supplied with a worm gear operator. The standard gear operator is supplied with a bracket and extension sleeve. Sizes available are 2" (50 mm) through 4" (100 mm).

Model

SJ-400 Butterfly Valve

The **Shurjoint** Model SJ-400 Butterfly Valve is a grooved end stainless steel butterfly valve, supplied with a 10 position lever handle (SJ-400L) or worm gear operator can be supplied as an option (SJ-400W). The body is available in CF8M (316) to ASTM A743 with integral neck and ISO 5211 mounting pad. It features a dual seal disc encapsulated with Gr. E-pw EPDM for cold and hot water services. The end-to-end dimensions conform to MSS SP-67.

‡ The weight includes the lever handle.

* Non-standard/stock items may require longer lead time.

** Working pressure is based on connection with roll- or cut-grooved standard wall stainless steel pipe.

Model

SJ-630 Three Port Ball Valve

The **Shurjoint** Model SJ-630 is a grooved-end three-port ball valve designed to divert media from bottom inlet to either of the two outlets ports. The valve port is a regular port size and the stem features a blowout proof design to MSS SP-72 and API Standard 608. The valve body and trim materials are in compliance with NACE MR-01-75 requirements.

* Working pressure is based on connection with roll- or cut-grooved Sch. 40S stainless steel pipe.

Pressure Performance Data

Stainless Steel Couplings on Stainless Steel Pipe

The following tables show maximum cold working pressures (CWP) of **Shurjoint** stainless steel couplings used on stainless steel pipes. In general it is more difficult to achieve defined groove corners on stainless steel pipe than on carbon steel pipe. Always select the correct roll set for the pipe being grooved and process grooves as defined as possible. Contact your roll-groove tool manufacturer for recommendations.

Valves & Flow Control Components

Valves and Flow Control Components

Shurjoint *offers a wide range of grooved-end butterfly valves, ball valves, check valves, suction diffusers, strainers and expansion joints. Grooved-end valves and components can be installed 3 – 4 times faster than comparable flange components. With the removal of just a few bolts one can easily access the system for cleaning, maintenance, changes and or system expansion.*

Model

SJ-200 Low-Profile Butterfly Valve

The **Shurjoint** Model SJ-200 Butterfly Valve is a low profile, grooved-end butterfly valve designed for oil & gas, mining and other service applications. The working pressure is rated up to 232 psi / 1600 kPa and service temperatures are rated to +180°F / +82°C (Nitrile body liner). The Model SJ-200 features a fully rubber lined body with 316 stainless steel disc. The end to end dimensions conform to MSS SP-67. The lever handle is equipped with a tamper resistant locking device.

Not Recommended for Steam.

* Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.

Model

SJ-300N-L Butterfly Valve

The **Shurjoint** Model SJ-300N Butterfly Valve is a grooved-end shut-off valve equipped with a 10 position lever handle (SJ-300N-L) or worm gear operator (SJ-300N-W). The valve consists of an epoxy coated ductile iron body and EPDM or Nitrile (NBR) rubber encapsulated dual-seal disc. The Model SJ−300N is rated up to + 200° F (+93° C) for general service use and is UL classified in accordance with NSF/ANSI 61 and NSF/ANSI 372 for potable water service up to temperature +180° F (+82° C) with " E-pw" encapsulated disc. The end−to−end dimensions conform to MSS SP−67.

Model

SJ-300F Butterfly Valve

The **Shurjoint** Model SJ-300F Butterfly Valve is a grooved-end shut-off valve equipped with a weatherproof worm gear operator and supervisory switch and wiring.

The Model SJ-300F is cULus listed and FM approved for 300 psi (20 Bar, 2.0 MPa) WWP (water working pressure) service for indoor and outdoor use. Flow characteristics satisfy UL Specification 1091 and FM Approval Standard 1112.

When the Model SJ-300F Butterfly Valve is used in a fire protection piping, installation shall conform to NFPA 13 and NFPA 72.

The valve consists of an epoxy powder coated ductile iron body and EPDM rubber encapsulated dual-seal disc.

(1) End to end dimensions conforms to MSS SP-67.

(2) The weight includes the worm gear operator.

* Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.

‡ For Fire Protection pressure rating, listing, and approval information, please refer to Data Sheet B-42 or visit SHURJOINT website, www.shurjoint.com for details or contact your SHURJOINT Representative.

Model

SJ-500L Ball Valve

The **Shurjoint** Model SJ-500L is a ductile iron, grooved-end, two-piece, regular port ball valve designed and tested in conformance with MSS SP-110 and SP-72. The lever handle is equipped with tamper resistant locking holes. The SJ-500L is comprised of a ductile iron body and end cap, virgin TFE seats and chrome-plated carbon steel trim. Also available with stainless steel trim as an option.

* Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.

‡ For the first opening or closing of the valve when the valve is not continuously operated, an additional torque of 2.0 – 2.5 times the listed operating torque is normally required.

Model
SJ-500W Ball Valve with Gear Operator

The Model SJ-500W can be equipped with a worm gear operator. The standard gear operator is supplied with a bracket and extension sleeve. The ISO 5211 mounting pad allows for the mounting of power actuators.

Model
SJ-530 Three Port Ball Valve

The **Shurjoint** Model SJ-530 is a grooved-end three-port ball valve designed to divert media from bottom inlet to either of the two outlets ports. The valve port is a regular port size and the stem features a blowout proof design to MSS SP-72 and API Standard 608. The valve body and trim materials are in compliance with NACE MR-01-75 requirements.

Model

SJ-900 Swing Check Valve

The **Shurjoint** Model SJ-900 Swing Check Valve is a grooved-end check valve featuring a spring-loaded wide-open clapper and a non-stick leak tight EPDM rubber seal. With a rated working pressure of 300 psi (20 Bar), the valve can be installed in the horizontal or vertical position (upward flow only). Valves are tested to API 598.

* Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.

Model

SJ-915 Dual Disc Check Valve

The **Shurjoint** Model SJ-915 is a grooved-end dual-plate (or double-door) check valve designed to provide positive and silent protection against backflow in piping systems. The valve features a ductile iron body with an EPDM or Nitrile (NBR) resilient seat molded to the body and type 304 stainless steel discs loaded with type 313 stainless steel springs.

Model

SJ-930 Horizontal Swing Check Valve

The **Shurjoint** Model SJ-930 horizontal swing check valves are supplied with grooved ends and are designed for general services including mining and oilfield applications. The SJ-930 features a bonnet cap which is drilled, tapped (½" NPT), and plugged and secured using a **Shurjoint** XH-70EP* coupling. The 316 stainless steel clapper is supplied standard encapsulated with Nitrile. As an option we offer Fluoro-elastomer or Teflon encapsulations to meet your service requirements.

* SJ-930 in size 4" is equipped with **Shurjoint** #7771 5" Rigid Coupling.

* Pressure ratings are based on cut-grooved sch. 40 or thicker pipe connected with Shurjoint XH-70EP extra heavy rigid couplings.

SHURJOINT®

Model
651 Expansion Joint

The Model 651 Expansion Joint is a combination of couplings and specially machined pipe nipples that are joined in a series to accommodate the expansion and contraction of a piping system. Standard units are comprised of either Model 7705 or Model 7707 flexible couplings and cut grooved Sch. 40 pipe nipples. Customized units are also available. The components are epoxy coated (RAL3000 red) for ease of use and longer life. The Model 651 is designed only for use on straight pipe runs and require independent supports and or guides to prevent deflection.

† For Performance Data refer to Data Sheet C-01 for Model 7705 and Data Sheet C-02 for Model 7707.
Note: Available with greater or less movement by adding or eliminating couplings and nipple units.
§ L – (ref.) Length dimensions may vary slightly due to tolerances.

Model

725G Suction Diffuser

The **Shurjoint** Model 725G Suction Diffuser features a space saving design, ductile iron body and integral vanes that effectively reduce turbulence and provide optimum flow conditions at the inlet side of the pump.

The suction diffuser's inlet is supplied with a grooved end to AWWA C606-04. The 725G can be connected directly to grooved end pump or to a flanged end pump if used in combination with a Model 7041 Flange Adapter or a Model 7180 Universal Flange Adapter.

The Model 725G is supplied with a 304 stainless steel running strainer and a disposable fine mesh screen to protect the pump during start-up operation.

* Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.
‡ When ordering, specify the desired flange drilling.

Model
726 Y-Strainer

The **Shurjoint** Model 726 Grooved-end Y-Strainers are designed to strain foreign matter and debris from piping systems and provide inexpensive protection for costly pumps, meters and other pipeline components. The Model 726 features a low pressure drop, fast installation, easy maintenance and is suitable for either vertical or horizontal installation.

Standard Screen: 1/16" (1.6 mm) perforated for 2" – 3" sizes and 1/8" (3.2 mm) perforated for 4" – 16". Other customized screen perforations are also available upon request.

** Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.

* Non-standard/stock items may require longer lead time.

SHURJOINT®

Model
728 T-Strainer

The **Shurjoint** Model 728 Grooved-end T-Strainers are designed to strain foreign matter and debris from piping systems and provide inexpensive protection for costly pumps, meters and other pipeline components. The Model 728 features a low pressure drop, fast installation, easy maintenance and is suitable for either vertical or horizontal installation. The Model 728 installs with two **Shurjoint** couplings, and is rated up to 750 psi (52 Bar) depending upon the installed coupling's pressure rating and size.
Standard Screen: Mesh 12 for sizes 2" – 3" and mesh 6 for sizes 4" – 14".

350	355.6	17	559	451	540	40	84.5

* 1) Working pressure is based on connection with roll- or cut-grooved standard wall carbon steel pipe.
2) Working pressure is maximum based on Shurjoint Model Z07 access coupling and will be governed by couplings used for installation and related system components. Maximum differential pressure from inlet to outlet must not exceed 10 psi (0.69 Bar).
3) Working pressure is dependent upon the Shurjoint coupling used to join Model 728 to the piping system.
** Non-standard/stock items may require longer lead time.

The T-strainer shall be cleaned periodically or before the differential pressure reaches 10 psi.

Model
RCV Riser Check Valve

The **Shurjoint** Model RCV is a grooved-end ductile iron body check valve, designed for use in the risers of wet type fire protection systems. The single clapper design features dual springs for non-slamming operation and the streamlined body provides for low friction loss. The valve can be installed in the vertical or horizontal position. Valves are tested to UL 312.

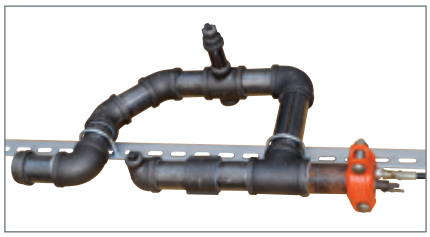
Threaded Fittings & Welding Outlets

Threaded Fittings & Welding Outlets

***Shurjoint** offers a complete range of ductile iron Class 300 threaded fittings in sizes from ½" to 2½" (15 mm to 65 mm). **Shurjoint** ductile iron threaded fittings are 100% air tested underwater to ensure leak-free performance. The **Shurjoint** ductile iron fitting series is UL listed and FM approved, making them the right choice for fire protection and other general application services.*

Ductile Iron Class 300 threaded fittings are designed to the same basic dimensions as that of Class 150 malleable iron fittings. Though due to the superior strength characteristics, ductile iron fittings carry a much higher pressure rating. Laboratory tests confirm **Shurjoint** ductile iron fittings have passed hydrostatic test pressures exceeding 6,000 psi (414 Bar), which is equal to four times the 1,500 psi (103 Bar) as specified by ANSI B16.3 for 1¼" – 2" (32 mm – 50 mm) sizes.



Burst pressure testing of DI threaded fittings (2")

Pressure-Temperature Rating (ANSI B16.3 & B16.14)

Nom. Rating	Working Pressure (W.O.G.) @150°F / @65°C	Working Pressure Saturated Steam
Class 300	½" – 1" : 2000 psi / 140 Bar 1¼" – 2" : 1500 psi / 105 Bar 2½": 1000 psi / 70 Bar	300 psi (20 Bar)

*Proof test pressure: 1.5 times the working pressure, non-shock cold water.

Pressure-Temperature Rating Unions, Brass to Iron Seat (ANSI B16.39)

Nom. Rating	Working Pressure (W.O.G.) @150°F / @65°C	Working Pressure Saturated Steam
Class 300	600 psi / 42 Bar	300 psi (20 Bar)

*Proof test pressure: 1.5 times the working pressure, non-shock cold water.
*Max. Temperature: 450°F (ASME Boiler Code)

Pressure-Temperature Rating Companion Flanges (ANSI B16.42)

Nom. Rating	Working Pressure (W.O.G.) @150°F / @65°C	Working Pressure Saturated Steam
Class 150	250 psi / 17 Bar	150 psi (10 Bar)

*Proof test pressure: 1.5 times the working pressure, non-shock cold water.

Material: Ductile iron ASTM A536 Gr. 65-45-12

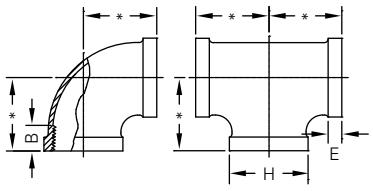
Dimensions: ANSI B16.3 Class 150 except bushings and plugs (B16.14), unions (B16.39) and companion flanges (B16.42) Please note wall thickness dimensions are subordinate to **Shurjoint** UL and FM pressure rating listings and approvals.

Threads: ANSI B1.20.1 NPT or ISO 7 (BSPT)

Finish: Black or electro-zinc plated

General Dimensions

These dimensions apply to all standard fittings, both straight and reducing. For center-to-face dimensions(*), see fitting tables.



Pipe Size	H Band O.D.	E Band Width	B Thread Length (min)
in	in	in	in
mm	mm	mm	mm
½	1.02	0.25	0.43

65	91	12	23

Welding Outlets

Shurjoint welding outlets provide an easy branch outlet at any desired location along the header pipe. Available in a variety of size and configurations including threaded, cut grooved and roll grooved ends. Welding outlets are UL listed and FM approved for fire protection applications.

Pressure-Temperature Rating

Nom. Rating	Working Pressure (W.O.G.) @150°F / @65°C	Working Pressure Saturated Steam
Class 300	600 psi / 42 Bar	300 psi (20 Bar)

*Proof test pressure: 1.5 times the working pressure, non-shock cold water.
*Burst test pressure: Minimum 3 times the working pressure.

Model

B20 Standard Top Beam Clamp
B24 Wide Mouth Top Beam Clamp

Size Range: ⅜" and ½" rod.
Material: Ductile iron casting with a hardened steel cup-point set screw and lock nut.
Application: Designed for structural attachment to the top of metal beams, channel or other structural shapes to support hanger rod. The universal design allows clamps to be installed in the top or bottom beam position.
Conforms to: Federal Specification WW-H-171 (Type 23), Manufacturers Standardization Society ANSI/MSS SP-58 (Type 19 & 23), install in accordance with ANSI/MSS SP-69. Exceeds requirements of NFPA 13.
Finish: Black or electro zinc plated.

Model

71 Female Threaded Outlet Fitting

The **Shurjoint** Model 71 Female Threaded Outlet Fittings are designed to provide a threaded outlet at any desired location along the header. Made of highly weldable SAE J403 forged steel the Model 71 is designed for single pass welding. The Model 71 features a counter bore and a 1.6 mm land around the full circumference of the mouth, which helps ensure full penetration welds and minimize the likelihood of any burn through or distortion that might be caused by excessive heat. The Model 71 is UL / cUL listed and FM approved for services up to 300 psi (20 Bar).

The precision machined mouth is designed to fit the first listed header size perfectly, and allows only a small gap along the longitudinal centerline of the second listed header size.

Each outlet size shown in the following table fits the same header pipe size. Special attention is required to the hole size (D) in the header pipe, which is one size smaller than the regular hole size.

Outlet Size	Header Size Range	Outlet O.D. A	Outlet Length B	Counter-bore C	Make-Up M	Hole Saw Dia. (Ref.) D	Max. Hole Dia. (Ref.) D	Weight

Model

72C Cut Grooved Welding Outlet

Model 72C Cut Grooved Outlet Fittings are designed to provide a cut grooved outlet at any desired location along the header. Made of standard wall (Sch.40) pipe, the Model 72C is recommended for use with Sch. 40 header pipes. The weld end is provided with a 1.6 mm land around the full circumference to assure a one-pass full penetration weld. The 72C fittings are recommended for services up to 300 psi (20 Bar).

Model

72R Roll Grooved Welding Outlet

Model 72R Roll Grooved Outlet Fittings are designed to provide a roll grooved outlet at any desired location along the header. Made of Sch. 10 pipe, the 72R R-Let is recommended for use with light wall pipes to minimize the likelihood of burn-through and or distortion of the header pipe. The 72R fittings are recommended for services up to 300 psi (20 Bar).

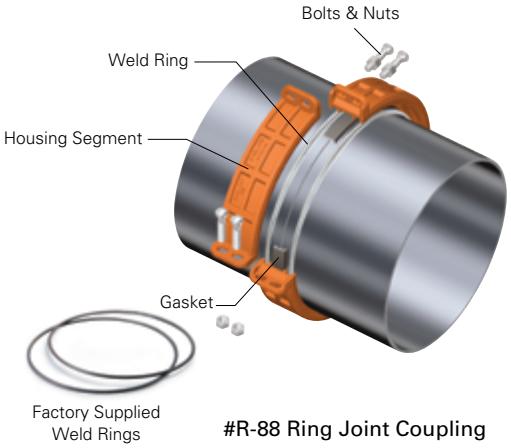
Section 6

Ring Joint, Shouldered & Plain-End Couplings

Ring Joint, Shouldered and Plain End Couplings

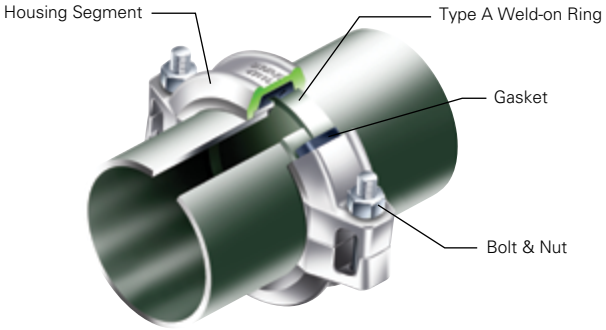
Shurjoint *ring joint, shouldered and plain end couplings are non-grooved mechanical pipe joining components and excellent alternatives where pipe is difficult to groove or when grooving is not the preferred method. The processing of a roll groove on pipe becomes more difficult as the pipe O.D. and or wall thickness increases. Roll grooving pipe larger than 14" (350 mm) requires proper tools and equipment. Pipe having a wall thickness greater than 0.375" (9.5 mm) may not be practical to roll groove.*

Ring Joint Coupling The **Shurjoint** ring joint coupling provides a much more secure joint than a comparable roll-grooved system, simply because the contact area of the rings is much greater than that of the roll-groove profile. In addition, the welded rings are able to withstand 2 - 3 times the shearing forces of roll grooves. High pressure couplings up to 3770 psi (260 Bar) are available.



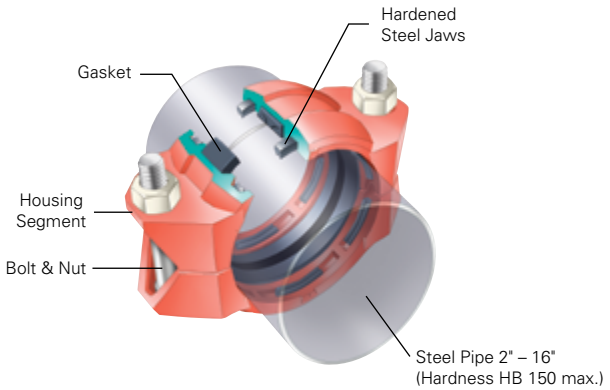
#R-88 Ring Joint Coupling

Shouldered Coupling The **Shurjoint** shouldered piping system is a classic and versatile pipe joining method which utilizes Type A weld-on rings. **Shurjoint** shouldered couplings are widely used in irrigation, dewatering on construction sites, and other installations.



#S35 Shouldered Coupling

Plain-End Coupling The **Shurjoint** plain-end coupling securely grips the pipe with its built-in case hardened jaws incorporated within heavy duty housing segments and heavy duty bolts and nuts. The **Shurjoint** Model 79 Wildcat coupling is designed to join plain-end or beveled-end carbon steel pipe without roll-grooving, welding or threading. The Model 79 plain-end coupling can be used for mining, process piping, manifold piping, and oil field services.



#79 Plain-End Coupling

Model

R-88 Ring Joint Coupling

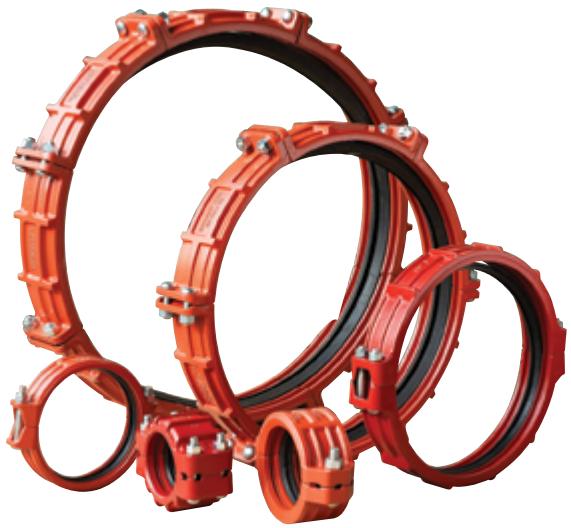
The **Shurjoint** Model R-88 Ring Joint Coupling is supplied with a pair of factory supplied weld rings. For installation weld a factory-supplied weld ring on each pipe end to be connected, next mount the rubber gasket over the pipe ends, place coupling segments over the gasket and fasten the bolts and nuts.

The **Shurjoint** R-88 Ring Joint Coupling is considered a shoulder coupling with the factory supplied weld rings serving as the joint shoulders. The R-88's performance standards meet and or exceed the requirements of ASTM F1476 and AWWA C606. The factory supplied weld rings offer a much more economical and convenient alternative to traditional shoulder rings, such as Type A, B, C, D, E, and G rings.

The R-88 Coupling can also be used on stainless steel pipe with optional weld rings available in compatible stainless steel grades. Check with **Shurjoint** for details and availability.

Typical applications

- Water & Waste Water Treatment Plants
- Mining & Tunnel Boring
- Pulp & Paper
- Hydroelectric Plants
- Co-Gen Electric Plants
- Food & Beverage
- Compressed Air
- HVAC



Max. Internal Service Pressures of Carbon Steel Pipe ASTM A53 Gr. B

When designing a piping system you must select pipe with the appropriate wall thickness to correspond with the intended working pressure of the system. The table lists design working pressure by the pipe wall schedule, XS, STD and LW, of representative ASTM A53 Gr. B carbon steel pipe calculated in accordance with the formula stipulated in ASME B31.1 Power Piping 104.1.

$$P = \frac{2SE\,(tm-A)}{Do - 2y\,(tm - A)}$$

Where:

P = Maximum internal service pressure (psi)
SE = Allowable stress (psi) (ASTM A53 Gr. B = 15,000 psi)
tm = Minimum pipe wall thickness (inch) (87.5% of nominal wall thickness)
Do = Outside diameter of pipe (inch)
y = A coefficient (For ferritic steels 600°F or below = 0.4)
A = Additional thickness (inch) (A = 0)

Max. Internal Service Pressure of Carbon Steel Pipe, ASTM A53 Gr. B

Unit: psi

SHURJOINT®

Model

R-88 Ring Joint Coupling

The **Shurjoint** Model R-88 Ring Joint Coupling is an ideal pipe joining method when pipe is difficult to groove or when grooving is not the preferred joining method. Available in sizes 8" to 96" the R-88 offers ease of use and excellent performance.

Model

R-88 Ring Joint Coupling

Large diameter

The **Shurjoint** Model R-88 Ring Joint Coupling is available in sizes 28" to 96" (700 mm to 2400 mm). The larger diameter couplings are comprised of 4 to 8 housing segments depending on the size and feature two bolts at each joint segment to ensure a positive connection.

Dimensions are subject to change without notice. Other sizes are available on request.
* Working Pressure is based on rings both sides fully welded standard wall carbon steel pipe.
# Working Pressure and End Load are the total from all internal and external loads based on the applicable pipe wall thickness.
† Allowable Axial Displacement and Angular Movement (Deflection) figures shown are the maximum nominal range of movement at each R-88 coupling joint when rings are welded in the standard position. For design and installation purposes these figures should be reduced by 25%.
‡ The number of ring clamps listed is the minimum required to correctly position the weld ring around the circumference of the pipe end.
** Non-standard/stock items may require longer lead time.

Model
RH-1000 1000 PSI Ring Joint Coupling

The **Shurjoint** Model RH-1000 coupling is a high pressure ring joint coupling for use with Sch. 40, Sch. 80 and heavier wall carbon steel pipe.
The coupling is comprised of two ductile iron heavy-wall housings, rubber gasket (EPDM or Nitrile) and two heat-treated track bolts and nuts which provide a fully restrained joint and a maximum working pressure of 1,000 psi (70 Bar) depending on the pipe used.
Two steel weld rings are factory supplied with the coupling. Steel rings must always be fully welded on both sides.

300	323.9	69	576.49	415	510	106				12.0 - 12.7	25	3.2	33.0

* Working pressure is based on standard wall carbon steel pipe. Burst test pressures are minimum 2 times the maximum working pressures.
ǂ Bolt & nut are UNC threaded. **Non-standard/stock items may require longer lead time.

Model
RX-3000 3000 PSI Ring Joint Coupling

The **Shurjoint** Model RX-3000 coupling is a high pressure ring joint coupling for use with Sch. 80, 120 and heavier wall carbon steel pipe.
The coupling is comprised of two ductile iron heavy-wall housings, rubber gasket (EPDM or Nitrile) and four heat-treated track bolts and nuts which provide a fully restrained joint and a maximum working pressure up to 3,000 psi (210 Bar) depending on the pipe used.
Two steel weld rings are factory supplied with the coupling. Steel rings must always be fully welded on both sides.

300	323.9	207	1729.46	470	572	173			15.9 ~ 16.0	31	3	96.24

* Working pressure is based on API 5L X65 line pipe. Burst test pressures are minimum 2 times the maximum working pressures.
ǂ Bolt & nut are UNC threaded. **Non-standard/stock items may require longer lead time.

Model

RX-3770 3770 PSI Ring Joint Coupling

The **Shurjoint** Model RX-3770 Ring Joint Coupling is designed to provide a fully restrained joint for use with extra-strong carbon steel pipe including API 5L Grade X65 line pipe.

The coupling is comprised of two ductile iron heavy-wall housing segments, rubber gasket (EPDM) and four heat-treated track bolts and nuts. Two steel weld rings are factory supplied with a coupling. Steel rings shall always be fully welded on both sides.

ǂ Bolt & nut are UNC threaded.

Ring Joint Fittings

Model

RJ-10 90° Elbow
RJ-11 45° Elbow
RJ-20 Tee
RJ-60 Cap

Shurjoint offers a full range of ring joint fittings for use with Model R-88 ring joint couplings.

- 8" - 16" (200 mm – 400 mm) Models RJ-10, RJ-11 & RJ-60 and Model RJ-20 are available in cast ductile iron to ASTM A536 Gr. 65-45-12.
- Larger sizes are made of carbon steel standard weight pipe, ASTM A53 Gr. B or equivalent, or fabricated from wrought carbon steel of the equivalent properties.
- Other configurations are also available upon request. Contact **Shurjoint** for details.

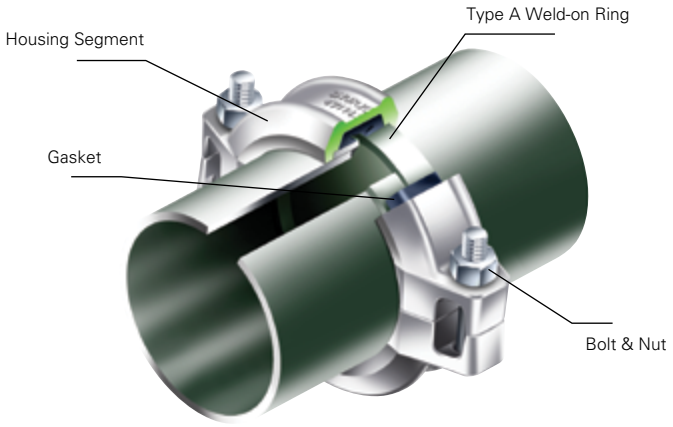
Shurjoint Shouldered Piping System

The **Shurjoint** shouldered piping system is a classic and versatile piping method used for a wide range of applications including irrigation, dewatering on construction sites, and other installations, etc. The shouldered system features full flow characteristics, provides speed and ease of installation, and proven reliability. The system provides for limited expansion and contraction and accommodates some linear and angular movement. Each joint is a union.

The **Shurjoint** shouldered piping system utilizes Type A weld-on rings, manufactured from mild steel or material compatible to pipe end used.



Shoulder Dimensions
(Type A Weld-on Rings)

The **Shurjoint** shouldered piping system utilizes Type A weld-on rings, manufactured from mild steel or material compatible to pipe end used. Type A rings are suitable for services up to maximum 600 psi (40 Bar) for sizes up to 4" (100 mm) and 400 psi (28 Bar) for 5" (125 mm) through 8" (200 mm).

300	323.9	336.5	20.6	3.2

Note: The exterior surface and the edge of the shouldered pipe ends must be free from any indentations, projections or other harmful surface defects such as weld splatters, any lumps of galvanizing, rust, dirt and score marks. Shouldered rings must be contacted or near tight to the pipe. The "stand off length* " must be accurately consistent in the circumference.
(*:The distance between the edge of the Shouldered ring and the pipe end (⅓ the shoulder length 'L').

Model
S35 Shouldered Flexible Coupling

The **Shurjoint** Model S35 coupling is a flexible type shouldered coupling for general applications for use on Type A shouldered pipe ends. The housing segments are made of ductile iron to ASTM A536 Gr. 65-45-12 and or A395 Gr. 65-45-15 and are normally supplied in hot-dip galvanized. The standard rubber gasket is Grade T Nitrile.

Model
SD-28A Shouldered Toggle Coupling

The **Shurjoint** Model SD-28A coupling is designed to connect shouldered-end pipe with Type A rings for services where frequent assembly and disassembly is desired or required. The housing segments are hinged with a lever handle for easy installation. The use of a split pin prevents accidental opening of the couplings. The housing segments are made of ductile iron to ASTM A536 Gr. 65-45-12 and or A395 Gr. 65-45-15 and are normally supplied in hot-dip galvanized. The standard rubber gasket is Grade T Nitrile.

** Working pressure is based on standard wall carbon steel pipe.

Plain-End Piping System for Steel Pipe

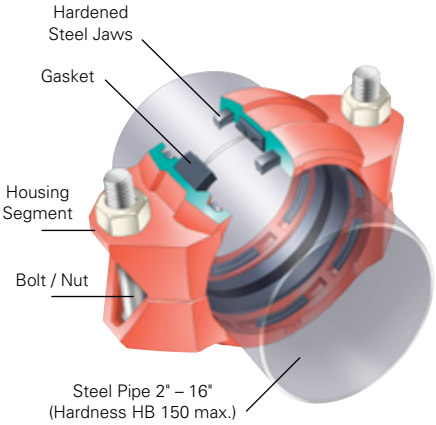
Model

79 Wildcat Coupling

The **Shurjoint** Model 79 Wildcat Coupling is designed to mechanically join plain-end or beveled end carbon steel pipe. The Wildcat couplings can be used for a variety of applications including mining, process piping, manifold piping and oilfield services. The Wildcat couplings feature case-hardened jaws* within the housings and large diameter heat treated track bolts that when tightened securely grip the pipe surface. As with grooved couplings, a C-shaped rubber gasket effectively seals the pipe ends (* For sizes larger than 14" (350 mm) , jaws are made of 17-4PH stainless steel.)

The Model 79 coupling is recommended for use on carbon steel pipe with a hardness less than HB150, not recommended for stainless steel, plastic, HDPE cast iron or other brittle pipe.

Gaskets are available either in Grade E EPDM for water services of -29°F to + 230°F (-34°C to + 110°C) or Grade T Nitrile for oil services -20°F to +180°F (-29°C to +82°C).



Bolts and nuts must always be tightened to the required torque.

Section 7

HDPE Series

HDPE Series

***Shurjoint** offers a series HDPE couplings and adapters for joining HDPE pipe. The use of HDPE (high density polyethylene) pipe continues to grow in popularity as its benefits over traditional materials are realized in a variety of service applications. The benefits of an HDPE pipe system include a longer service life, increased flexibility, reduced weight, increased resistance to corrosion, chemicals, and fatigue, as well as superior flow characteristics. HDPE is now commonly used in service applications including municipal water and waste water, water distribution and transport, mining, slurry and many other general and industrial applications.*

Shurjoint HDPE couplings provide a fast and easy way to mechanically join HDPE pipe. A series of sharply machined teeth securely grip the pipe as the bolts are tightened, resulting in a leak-free joint. The **Shurjoint** joining method eliminates the need for costly heat fusion equipment. The highly restrained joint allows long lengths of pipe to be pulled from one area to another. With the removal of a few bolts one can easily access the system for cleaning, maintenance, changes and or system expansion.

Shurjoint HDPE couplings are designed to join IPS HDPE pipe, DR32.5 to 7.3, conforming to ASTM D2513, D3350 and or ANSI/AWWA C901 and ISO HDPE pipe, SDR 9 to 26, conforming to ISO 4427-1/2.

As the ductile iron coupling is much stronger than HDPE pipe itself, pressure ratings of HDPE couplings are determined by the pressure rating of HDPE pipe used. Pressure ratings of HDPE pipe vary depending on DR or SDR (standard dimension ratio) and design stress of the material.

Pressure Ratings (psi) - IPS Size

Pipe Dimension Ratio (DR)	PE4710 PE100	PE3608 PE3408
DR 7.3	317	265
DR 9	250	200
DR 11	200	160
DR 13.5	160	130
DR 17	125	100
DR 21	100	80
DR 26	80	65
DR 32.5	63	50

Design stress: PE4710 1000 psi, PE3608 & 3408 800 psi

DR (Pipe Dimension Ratio) $DR = \frac{D}{t}$

Where:

D = pipe outside diameter, in

t = pipe minimum wall thickness, in

Pressure Ratings (Bar) - ISO Size

Pipe Dimension Ratio (SDR)	PE100	PE80
SDR 9	20	16
SDR 11	16	10
SDR 17	10	6.3
SDR 26	6.3	4

Design Stress: PE100 8.0 MPa, PE80 5.0 MPa

SDR (Standard Dimension Ratio) $SDR = \frac{D}{t}$

Where:

D = pipe outside diameter, mm

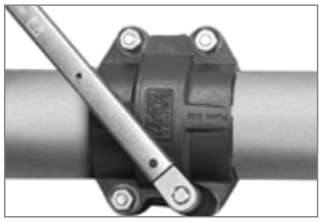
t = pipe minimum wall thickness, mm

How to install

Marking: Use a marker and measuring tape to place "Gasket Centering Marks" and "Coupling Centering Marks" on each pipe end per the installation instructions.

Install Gasket: Place a gasket over the pipe ends and center the gasket in between the first set gasket centering marks. The pipe ends should always be butted against each other.

Mount Housings: Place the housings over the gasket, ensure the gasket stays centered between the first set marks made on the pipe ends and the housings are properly centered between the second set coupling center marks. Also make sure that housing tongue and groove (T&G) mate correctly.



Tighten Nuts: Tighten nuts alternately and equally until the bolt pads meet and make metal-to-metal contact. Repeated alternate tightening will reduce tightening torque considerably. Tighten nuts by another one quarter to one half turn to make sure the bolts and nuts are snug and secure.

Refer to the **Shurjoint** installation instruction manual for complete instructions. **Shurjoint** HDPE couplings are not intended for use on PVC, PP or other materials. Do not use standard soap based lubricant on HDPE pipe. **Shurjoint** recommends the use of a silicone based lubricant with the HDPE series. In order to avoid injuries from the sharp machined teeth, wear gloves when handling.

Model

H305 HDPE Coupling

The **Shurjoint** Model H305 HDPE Couplings feature four bolt housings and a series of sharply machined teeth which securely grip the pipe as the bolts and nuts are tightened. The result is a leak-tight joint that is as strong as or stronger than the pipe itself. The H305 also features a contoured housing with integral ramps along the outside diameter to help the coupling slide over most obstacles during the relocation of pipe runs.

Section 8

Copper Series

Grooved Couplings, Fittings & Components for Copper Tubing

*The **Shurjoint** copper series is the most complete line of grooved components available for installation on copper tubing (CTS) in sizes 2" - 6" (50 mm - 150 mm) **Shurjoint** grooved mechanical components provide a fast, easy, economical and durable joining method of copper tubing without the use of heat or solder.*

Grooved-end fittings are produced from wrought copper and or bronze castings. Wrought copper conforms to ASTM B75 UNC C12200 (99.9% copper). Bronze castings are produced from lead-free C83470 copper alloy per ASTM B584. Materials are in compliance with NSF/ANSI 61 and NSF/ANSI 372 for potable water service applications.

Copper Tubing - Dimensions & Pressure Ratings (ASTM B88 & B306)

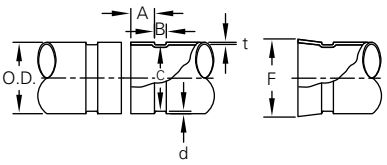
Notes: 1. Design stress: 6000 psi (41.4 MPa)
2. Pressures are based on water at 73.4°F (23°C).

Standard Roll Groove for U.S. Standard Copper Tubing



Roll Set
As copper tubing is thinner than carbon steel pipe, always use a roll set specifically designed for use on copper tubing.

Pipe O.D.
Maximum allowable tolerances from square cut ends is 0.03" for 2" thru 3"; 0.045" for 4" thru 6"; and 0.060" for sizes 8".

Gasket Seating Surface
The gasket seating surface shall be free from deep scores, marks, or ridges that would prevent a positive seal.

Groove Width
Groove width is to be measured between vertical flanks of the groove side walls.

Groove Diameter
The "C" diameters are average values. The groove must be of uniform depth around the entire pipe circumference.

Groove Depth
The "d" is for reference use only. The groove dimension shall be determined by the groove diameter "C".

Minimum Wall Thickness
The DWV pipe (ASTM B-306) is minimum wall thickness that may be roll grooved.

Flare Diameter
The pipe end that may flare when the groove is rolled shall be within this limit when measured at the extreme end of the pipe.

Nominal Size	Pipe O.D. Basic Size	A Gasket Seat ±0.03 / ±0.79	B Groove Width ±0.03 / ±0.79	C Groove Dia. +0/-0.02 / +0/-0.51	d Groove Depth (ref.)	t Min. Allowed Wall Thick.	F Max. Allowed Flare Dia.

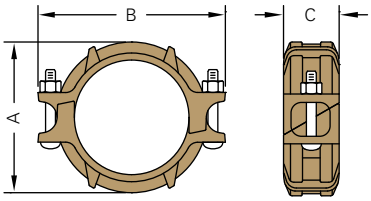
Model

C305 Rigid Coupling for Copper Tubing (CTS)

The Model C305 features angle bolt pad design for a rigid joint and easy swing-over installation. The C305 couplings are comprised of epoxy coated ductile iron housings and EPDM GapSeal gaskets and are rated up to 300 psi (20 Bar), depending on the type and size of copper tubing used.



TYPE K, L, M (ASTM B-88) & TYPE DWV (ASTM B306)

Model
C306 Reducing Coupling for Copper Tubing (CTS)

The Model C306 Reducing Coupling allows direct reduction on a piping run and eliminates the need for a concentric reducer and couplings. The epoxy coated ductile iron coupling housings help eliminate galvanic local cell and stray current problems. The specially designed rubber gasket prevents the smaller pipe from telescoping into the larger pipe during vertical installation.

Notes / Options: Couplings with rubber gaskets are likely to function as an insulator. Where electrical continuity is required, the Shurjoint Model 96 Continuity Clip will restore electrical continuity to the system. The continuity clip satisfies IEE Wiring Regulations.

Model
96 Continuity Clip

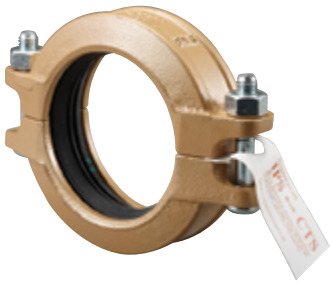
Couplings with rubber gaskets are likely to function as an insulator. Where electrical continuity is required, the **Shurjoint** continuity clip will restore electrical continuity to the system. The electrical continuity clip satisfies IEE Wiring Regulations. Material: Copper or Brass plate.

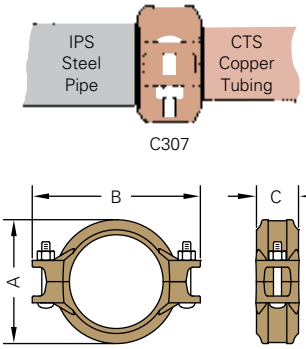
Note: The pipe surface where continuity clips come in contact must be conductive. If the surface is painted, the paint should be removed to expose bare metal.

Model	Coupling Size	Box Q'ty/pcs
96-1	1" - 3"	125
96-2	4" - 6"	125
96-3	8" - 12"	100

Model
C307 Transition Coupling (IPS X CTS)

The Model C307 Transition Coupling provides for a direct connection and transition between grooved end IPS steel pipe, fittings or valves and grooved end CTS copper tubing. The rubber gasket isolates the fluid from coupling housings and the epoxy coated housings help eliminate galvanic local cell and stray current problems. The C307 is rated to 300 psi (20 Bar).





Nominal Size	Pipe O.D. IPS X CTS	Max. Working Pressure (CWP)*	Axial Displacement	Deflection	Dimensions			Bolt Size	Weight

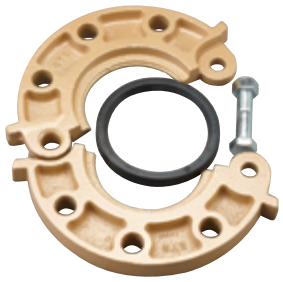
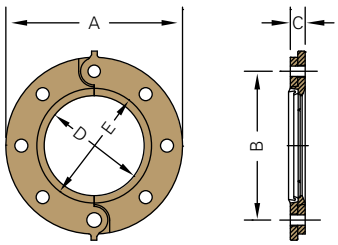
100	114.3 x 104.8	20	0 - 1.6		145	170	47		1.9

* Working pressure is for connection with roll-grooved Type K copper tubing.
Notes / Options: Couplings with rubber gaskets are likely to function as an insulator. Where electrical continuity is required, the Shurjoint Model 96 Continuity Clip will restore electrical continuity to the system. The continuity clip satisfies IEE Wiring Regulations.

Model
C341 Flange Adapter for Copper Tubing (CTS)

The **Shurjoint** Model C341 Flange Adapter allows for the direct connection of grooved-end copper tubing with ANSI Class 125/150 (steel) or ASME B16.24 (copper) Class 150 flanged components without the need for heat or solder. The pressure responsive gasket seals on the outside diameter of the copper tubing and isolates the flange segments from the internal fluid.





2"~12"(hinged)

150	155.6	20	279	241	25	156	198			6.2

* Working Pressure is for connection with roll-grooved Type K copper tubing
** Please note that 2", 2½", and 3" Model C341 Flanges cannot be used for making direct connections to Model SJ-C300 Butterfly Valves due to bolt pad interference with the valve.

Grooved Fittings for Copper Tubing

Shurjoint Grooved-end fittings are produced from bronze castings. Bronze castings are produced from lead-free C83470 copper alloy per ASTM B584. Materials are in compliance with NSF/ANSI 61 and NSF/ANSI 372 for potable water service applications. **Shurjoint** fittings are designed for use with **Shurjoint** CTS couplings, components and ASTM B88 roll grooved copper tubing type K, L, M and ASTM B-306 DWV.

Model

C55 Transition Adapter (IPS X CTS)

The **Shurjoint** Model C55 Transition Adapter provides a direct transition between male threaded-end steel pipe (IPS) and grooved-end copper tubing. The C55 is UL classified to NSF/ANSI 61 and NSF/ANSI 372 for use in potable water systems.

*Non-standard/stock items may require longer lead time.

Model
DE30-GG Dielectric Transition Fitting (IPS X CTS)

The Model DE30-GG Dielectric Transition Fitting provides a direct transition between grooved-end steel pipe (IPS) and grooved-end copper tubing (CTS). The internal PP lining effectively eliminates galvanic local cell and stray current problems.

Model

C723 Bronze Mechanical Tee for Copper Tubing (CTS)

The **Shurjoint** Model C723 provides a fast, easy and reliable branch connection from copper tubing (CTS). The fitting consists of a bronze upper housing, ductile iron lower housing, o-ring and carbon steel track bolts and nuts. The fitting is available with a female threaded outlet, NPT or BSPT.

* Working pressure is for connection with Type K copper tubing.
**T: Center of run to engaged pipe end (approx.).

Use a torque wrench and tighten the nuts to an approximate torque value of 5 Lbs-Ft ~ 9 Lbs-Ft (20 Nm ~ 30 Nm). Excess torque may cause joint failure.

Model

C726 Y-Strainer for Copper Tubing (CTS)

The **Shurjoint** Model C726 Y-Strainer can be installed quickly and easily with two mechanical couplings and the straight flow through design provides for lower pressure drop.

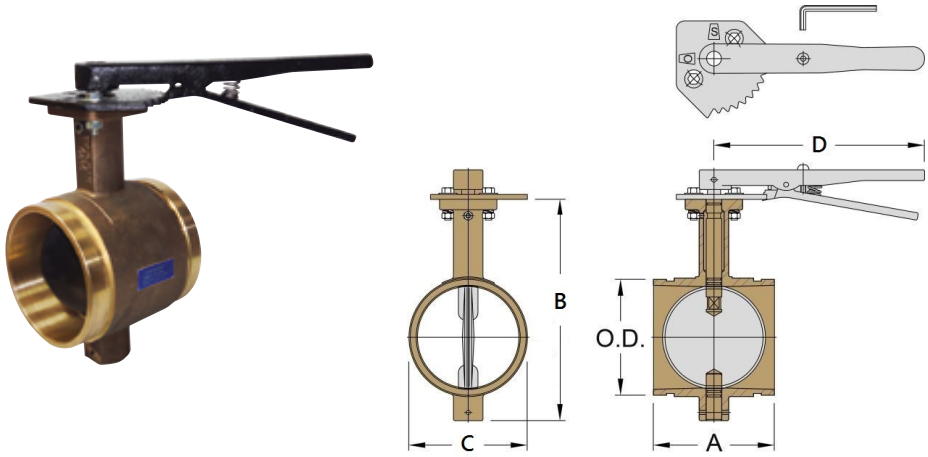
* Working pressure is for connection with roll-grooved Type K copper tubing.

Model

SJ-C300 Butterfly Valve for Copper Tubing (CTS)

The **Shurjoint** Model SJ-C300 is a lever handle bronze body butterfly valve designed for use with grooved copper tubing (CTS), fittings and couplings. The lead-free bronze body conforms to ASTM B584 copper alloy C83470 which is UL classified in accordance with NSF/ANSI 61 and NSF/ANSI 372 for potable water use.



Nominal Size	Pipe O.D.	Max. Working Pressure (CWP)*	Dimensions				Weight

Section 9

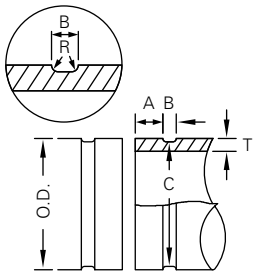
AWWA Ductile Iron Series

AWWA Ductile Iron Series

Shurjoint *offers a variety of grooved mechanical couplings and fittings for AWWA ductile iron pipe in sizes 3" to 24". The* ***Shurjoint*** *coupling features a two-piece housing and GapSeal gasket for a leak-tight seal. Ductile iron pipe shall be cut-grooved to AWWA C606 Table 2 and Table 3 - Radius Cut Groove Specifications.*

Rubber gaskets are specially compounded to seal on ductile iron surfaces and are available in three grades to meet your service requirement needs. *See page 179 for details.*

Radius Cut Grooving Dimensions – Ductile Iron Pipe



Gasket Seating Surface (A):
The same coupling can be used either as a rigid joint or a flexible joint depending on the groove. Gasket seat "A Rigid" is for rigid joints and Gasket seat "A Flex." for flexible joints.
The gasket seating surface shall be free from deep scores, marks, or ridges that could prevent a positive seal.

Groove Diameter (C):
The "C" diameters are average values. The groove must be of uniform depth around the entire pipe circumference.

Radius (R):
The groove must be cut with a radius 'R' at the corners of the groove to reduce stress concentration.

Minimum Wall Thickness (T):
"T" is the minimum allowable wall thickness that may be cut-grooved; tolerances are to conform to ANSI/AWWA C151/A21.51.

AWWA Ductile Iron Pipe

Model
A505 Coupling

Shurjoint Model A505 Couplings are designed for connecting grooved ductile iron pipe and fittings of ANSI/AWWA C151/A21.51, Class 53 or higher dimensions. The same coupling can be used either as a flexible coupling or a rigid coupling depending on the type of groove processed. The Model A505 Coupling is recommended for service up to 500 psi (35 Bar) depending on the size.

The GapSeal gasket fits flush over the pipe ends and prevents fluids from entering into the gasket cavity.

† Only when connected on flexible radius groove.

Special gaskets for AWWA ductile iron pipe

Grade	Temp. Range	Compound	Color Code	General Service Recommendations
S	-20°F to + 180°F (-29°C to +82°C)	Nitrile	 Red Stripe	Specially formulated to seal on ductile iron pipe iron surfaces. Recommended for petroleum products, air with oil vapors, vegetable and mineral oils within the specified temperature range; except hot dry air over +140°F (60°C) and water over +150°F (65°C) **Not Recommended for Hot Water Services.**
M	-20°F to + 200°F (-29°C to +93°C)	Halogenated Butyl	 Brown Stripe	Specially formulated to seal on ductile iron pipe surfaces. Recommended for water service plus a variety of dilute acids, oil-free air and other chemical services within the specified temperature range. The compound is UL classified per NSF/ANSI 61 and NSF/ANSI 372 for potable water applications. **Not Recommended for Hot Water Services.**
L	-30°F to + 350°F (-34°C to +177°C)	Silicone	 Red Gasket	Recommended for dry heat, air without hydrocarbons to 350°F (177°C) and certain chemical services.

Model
A507 Transition Coupling

The **Shurjoint** Model A507 Transition Coupling provides for a direct connection between grooved end IPS steel pipe and grooved end AWWA ductile iron pipe, fittings and or valves. The A507 will accommodate roll or cut grooved IPS steel pipe and rigid or flexible AWWA ductile iron cut grooves.

Model
A512 Flange Adapter

The **Shurjoint** Model A512 Flange Adapter provides for the direct connection between AWWA ductile iron radius pipe grooves and flanged components. The two part flange features integral closure tabs to aid in assembly. Note: As with other flange adapters the A512 requires a sufficient smooth flat mating area for proper sealing, please refer to the A512 cut sheet or contact **Shurjoint** for details.

AWWA Grooved Fittings

Model

A10 90° Elbow
A11 45° Elbow
A20 Tee
A60 Cap

Shurjoint AWWA grooved end fittings are supplied with rigid radius grooves as per ANSI / AWWA C606. The fittings also conform to ANSI A21.10 / AWWA C110 for center to end (C to E) dimensions and AWWA C153 or ANSI A21.10 / AWWA C110 for wall thickness. Pressure ratings are 500 psi (35 Bar). Fittings are supplied painted black. Other surface finish options including 'non-coated' and cement/mortar lining Type II are available on request.

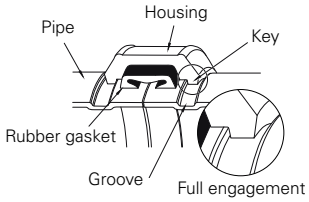
Technical Information

Pipe End Preparation

How to process roll-grooves

Shurjoint *grooved piping systems require the processing of a roll or cut groove to the pipe ends being connected. The engagement of the housing keys in the grooves is integral in providing a secure and leak-tight joint. It is essential that the grooves are properly processed for optimum joint performance.*

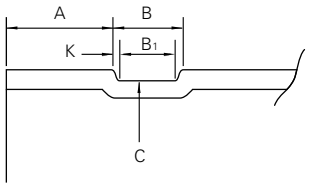


Nominal pipe size

Shurjoint couplings and fittings are identified by the nominal IPS pipe size in inches or nominal diameter of pipe (DN) in millimeters. Always check the actual O.D. of the pipe and fittings to be connected, as in some markets it is customary to refer to different O.D. pipes with the same nominal size.

Roll groove profile

Roll grooves should be as defined as possible. To achieve optimum joint performance the "K" dimension should be as small as possible. When processing a roll groove the machine operator should manage the feed pressure of the upper roll set so as to achieve the best possible groove profile.

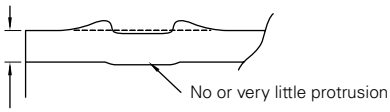


Applicable pipe wall thickness

Roll grooves are generally applicable to .375"/9.5 mm thick or thinner wall carbon steel pipe, stainless steel pipe, copper tube and aluminum pipe depending on the type of roll-grooving machine and roll set being used. Different wall thicknesses and sizes require the use of different roll sets. Contact the roll groove machine manufacturer for additional information.

Heavy wall pipe

When you attempt to roll-groove pipe thicker than .375"/9.5mm, the metal may deform and heap up on both sides of the groove rather than radially deforming and protruding on the inside of the pipe. The extra heaped metal could lead to joint failure. In such a case, you should grind off any such extra metal to achieve a flat and smooth sealing surface. A proper rust preventative coating must be applied on the ground surface. **Shurjoint** strongly recommends the processing of cut-grooves on heavy or thick wall pipe.



Thicker than 0.375" (9.5mm)

Plain end pipe and beveled end pipe

While plain-end pipe is preferred, the use of beveled end pipe is acceptable providing that the wall thickness is .375"/9.5 mm or thinner and the bevel is 37½ ±2½° or 30° as specified in ANSI B16.25 and ASTM A-53 respectively.

ERW pipe

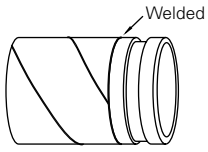
ERW pipe is one of the most popular types of pipe used today. Depending on the individual pipe and manufacturer, welding beads may remain on the surface (inside and outside) of the pipe. Always remove harmful weld beads near the pipe ends as they can cause rattling of the roll grooving machine resulting in inaccurate grooves.

Galvanized pipe

Galvanized pipe is acceptable as long as the gasket seating surface is smooth and free from scale and imperfections that could affect gasket sealing. Whenever you remove welding beads or projections from the sealing surface of galvanized pipe, use caution so as to not over-grind the surface. After grinding, always apply a proper rust-prevention coating to this area.

Spiral welded pipe

Spiral welded pipe may be used as long as the weld beads are removed from the gasket seating surface. It is also acceptable and recommended to weld a grooved end nipple to the pipe end as shown below. Whenever you remove weld beads or projections from the gasket seating surface, use caution so as to not over-grind the surface. After grinding, always apply a proper rust-prevention coating to this area.



Spiral pipe with
a grooved nipple

Roll Grooving Dimensions for ANSI B36.10, BS 1387 (M) & AS-1074 (M) Pipe

Basic roll groove dimensions conform to ANSI/AWWA C606-06 Table 5 with slightly adjusted tolerances to incorporate international standards including CSA B242, ISO/FDIS 6152-12, VdS 2100-6en and JPF MP-006.

1. Pipe O.D.: Maximum allowable tolerances from square cut ends is 0.03" for sizes up to 3½"; 0.045" for 4" thru 6"; and 0.060" for sizes 8" and above.
2. The gasket seating surface "A" shall be free from deep scores, marks, or ridges that would prevent a positive seal.
3. The "C" dimensions are average values. The groove must be of uniform depth around the entire circumference. Use a Shurjoint groove gage or rule to check the groove diameter.
4. The "t" is the minimum allowable wall thickness that may be roll-grooved.
5. The "d" is for reference use only. The groove depth shall be determined by the groove diameter "C".
6. Flare Diameter: The pipe end that may flare when the groove is rolled shall be within this limit when measured at the extreme end of the pipe.

Roll Grooving Dimensions per ISO/FDIS 6182-12 Table 1

For ISO 4200:1991 Plain-end Steel Tubes, Welded and Seamless (Superseding BS1387 and DIN 2440 & DIN 2448)

1. Pipe O.D.: Maximum allowable tolerances from square cut ends is 0.03" for sizes up to 3½"; 0.045" for 4" thru 6"; and 0.060" for sizes 8" and above.
2. The gasket seating surface "A" shall be free from deep scores, marks, or ridges that would prevent a positive seal.
3. The "C" dimensions are average values. The groove must be of uniform depth around the entire circumference. Use a Shurjoint groove gage or rule to check the groove diameter.
4. The "t" is the minimum allowable wall thickness that may be roll-grooved.
5. The "d" is for reference use only. The groove depth shall be determined by the groove diameter "C".
6. Flare Diameter: The pipe end that may flare when the groove is rolled shall be within this limit when measured at the extreme end of the pipe.

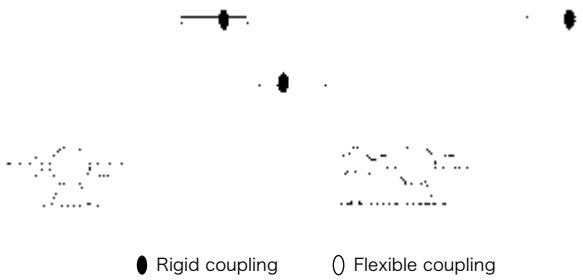
1. Pipe OD: Maximum allowable tolerances from square of ends is 0.03" for sizes up to 3½"; 0.045" for 4" thru 6", and 0.060" for sizes 8" and above.
2. Gasket Seating Surface: The gasket seating surface shall be free from deep scores, marks, or ridges that would prevent a positive seal.
3. Groove Width: Groove width is to be measured between vertical flanks of the groove side walls.
4. Groove Diameter: The "C" diameters are average values. The groove must be of uniform depth around the entire pipe circumference.
5. Minimum Wall Thickness: The "t" is the minimum allowable wall thickness that may be cut-grooved.
6. Groove Depth: The "d" is for reference use only. The groove dimension shall be determined by the groove diameter "C".

Typical Applications - Flexible Couplings

- General Systems -

1. Absorption of vibration and noise

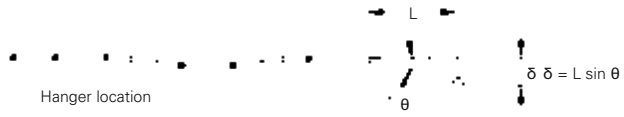
When a pump operates with frequent starts and stops, the piping system is affected by the noise and vibration of the equipment. The entire system may develop a large sway, referred to as sympathetic vibration, as a result of the frequent cycling. **Shurjoint** flexible couplings will help reduce such vibration and noise. The system should always be properly designed with steel angle sway braces to protect the system from large sways.



● Rigid coupling ○ Flexible coupling

2. Adjustment of misalignment

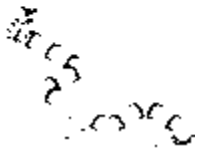
When a straight run has need for a slight adjustment of alignment on the jobsite as shown in the diagram, you can accomplish this with the use of two flexible couplings. The following table shows the deflection value (θ) of the **Shurjoint** 7705 flexible couplings.



Amount of deflection (δ)						
Nominal Size	Deflection Angle(θ)	Distance between couplings (L) mm				
		600	1200	1500	2000	3000
2" / 50	3° 02'	32	64	79	106	159
2½" / 65	2° 30'	26	52	65	87	131
3" / 80	2° 04'	22	43	54	72	108
4" / 100	3° 12'	34	67	84	112	168
5" / 125	2° 36'	27	54	68	91	136
6" / 150	1° 10'	12	24	31	41	61
8" / 200	1° 40'	17	35	44	58	87
10" / 250	1° 20'	14	28	35	47	70
12" / 300	1° 08'	12	24	30	40	59

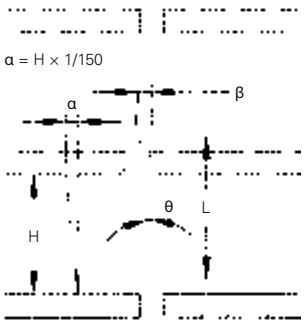
3. Absorption of distortion

With the use of an assembly as shown below, ground sinking or movement around a tank or reservoir can be effectively absorbed, avoiding damage to the tank, reservoir and or the piping system.



4. Absorption of inter-floor deflection

Risers of high-rise flexible structure buildings are subjected to lateral sways (inter-floor deflection) when an earthquake occurs. If we assume the inter-floor deflection is 1/150 and the floor height (H) as 4 meters, the estimated inter-floor deflection (α) will be;



α = H x 1/150 = 4000 x 1/150 = 27 mm

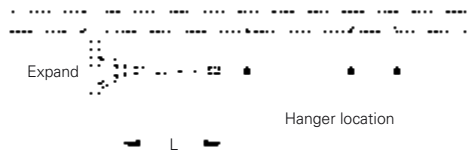
If we use a 200 mm (8") 7707 coupling for each floor, the maximum deflection (β) that each coupling can accommodate will be;

β = L x tan θ = 4000 x 0.02915 = 4.56" = 116 mm (θ = 1.67°)

The example shows a flexible coupling would be sufficient to absorb this scale of seismic sways.

5. Absorption of misalignment

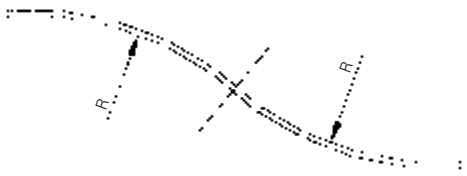
As shown in the diagram, each branch connection to the free riser will be subjected to serious shearing forces as pressure thrusts or thermal movement increases. By using two flexible couplings, you can solve this problem.



6. Curved layout

With **Shurjoint** flexible couplings you can design a slowly curved layout for a system along a curved tunnel, winding road or curved building.

$$R = \frac{L}{(2 \times \tan \theta/2)}$$ (where: R is radius of curvature, L is pipe length, and θ is max. allowed deflection of a coupling)



Example: When using model 7705 100 mm (4") couplings for the layout as shown in the diagram, the max. allowed deflection (θ) of the coupling is 3.4°, and the pipe length (L) is 5.5 meters, the radius of curvature (R) will be 92.7 meters.

7. Absorption of Thermal Stress

Thermal stress is caused by changes in temperature, resulting in either expansion or contraction. With the use of **Shurjoint** flexible couplings you can design your system to accommodate such movement without the need for costly expansion joints. The thermal expansion or contraction (μ) is determined by the length of pipe (L) and temperature difference (ΔT).

$$\mu = \alpha \times L \times \Delta T$$

Thermal Expansion (Metric)						
Temperature Difference ΔT (°C)	Pipe Length L (meters)					
	1	5.5*	10	20	30	40
	Thermal Expansion (millimeters)					
1	0.012	0.07	0.12	0.24	0.36	0.48
5	0.06	0.33	0.6	1.2	1.8	2.4
10	0.12	0.66	1.2	2.4	3.6	4.8
20	0.24	1.3	2.4	4.8	7.2	9.6
30	0.36	2	3.6	7.2	11	15
40	0.48	2.6	4.8	9.6	14	20
50	0.6	3.3	6	12	18	24
60	0.72	4	7.2	14	22	29
70	0.84	4.6	8.4	17	25	34
80	0.96	5.3	9.6	19	29	39

* 5.5 meters is the standard length of commercial carbon steel pipe.

As the linear expansion coefficient for steel (α) is 1.2 x 10^{-5}, you can use the table above to determine the thermal expansion.

Example:

- Pipe size: 100 mm (4")
- Max. pipe end separation (E) : 3.2 mm
- Pipe length (L) : 5500 mm
- Temperature difference (ΔT) : 40° C (+5° C to +45° C)
- α = 1.2 x 10^{-5} / ° C

$$\mu = \alpha \times L \times \Delta T = 1.2 \times 10^{-5} / ° C \times 5500 \text{ mm} \times 40° C = 2.64 \text{ mm}$$

The thermal expansion of a 5.5 meter standard length of pipe (μ) is within the allowance (= max. pipe end separation) of a flexible coupling. In other words, if you use a coupling for each pipe length of 5.5 meters, the coupling will accommodate the thermal expansion or contraction expected to take place for a 40° C temperature change. When you calculate the necessary number of couplings (N) for an anchored system, you should place a clearance of N x E x ½ as a safety factor.

Whether it is thermal expansion, contraction, or a combination thereof, the system requires suitable anchor installations with properly space alignment guides and weight support devices. Where and when larger thermal movement is anticipated, you should use supplementary expansion joint(s).

For installers who use the imperial units of measure, the following table will be more convenient.

Thermal Expansion (Imperial)				
Temperature (°F)	Pipe Lenght L (feet)			
	20	40	60	100
	Thermal Expansion between 70° F and indicated temperature (inch)

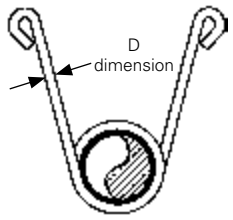
* Coefficient of thermal expansion of steel pipe = 6.33 in/in, °F x 10^{-6}

Anchoring, Hanging and Supports

Shurjoint grooved couplings are designed to hold axial thrusts 4–5 times their rated working pressure, though the strength against bending movements is less than that of steel pipe. The joint may be damaged when a bending movement greater than the allowed deflection occurs. System designers should provide anchors (main and intermediate) and pipe guides with proper spacing to protect the system from unexpected large bending movements.

These illustrations are examples only, and are not intended to be used for all installations as conditions and requirements vary from job to job. Reliance on general data or information contained herein shall be at the user's sole risk and without obligation to **Shurjoint**.

Hangers shall be designed to support five times the weight of water-filled pipe plus 250 lb (115 kgs) at each point of pipe support (NFPA 13 9.1.1.1.). The following illustrations are examples of acceptable hanger types and sizes per NFPA 13.



Wraparound U-hook

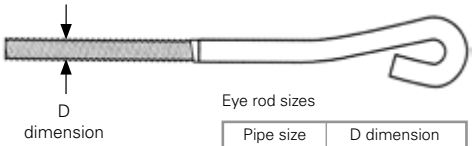
U-Hook sizes

Pipe size in	D dimension in / mm
~ 2	5/16 (7.9)
2½ ~ 6	⅜ (9.5)
8	½ (12.7)

Adjustable swivel Ring - rod tight to pipe

Rod sizes

Pipe size in	D dimension in / mm
~ 4	⅜ (9.5)
5 ~ 8	½ (12.7)
10 ~ 12	⅝ (15.9)



Eye rod sizes

Pipe size in	D dimension in / mm
~ 4	⅜ (9.5)
5 ~ 6	½ (12.7)
10 ~ 12	¾ (15.1)

Hangers for straight runs

For straight runs, you can use both flexible and rigid couplings. When rigid couplings are used, the same hanger spacing as other piping methods can be applied. You can refer to the hanger spacing standards of ANSI B31.1 Power Piping Code, B31.9 Building Services Piping Code, NFPA 13 Sprinkler Systems, or *Mechanical Equipment Construction Guide (Japan). See the table below.*

Suggested Max. Span between Supports (steel pipe)

Nominal Pipe Size	Water Service (feet / meters)				Gas or Air Service (feet / meters)		
in/mm	1)	2)	3)	4)	1)	2)	3)
1 / 25	7 / 2.1	9 / 2.7	12 / 3.7	6.6 / 2.0	9 / 2.7	10 / 3.0	12 / 3.7
1¼ / 32	7 / 2.1	11 / 3.4	12 / 3.7	6.6 / 2.0	9 / 2.7	12 / 3.7	12 / 3.7
1½ / 40	7 / 2.1	12 / 3.7	15 / 4.6	6.6 / 2.0	9 / 2.7	13 / 4.0	15 / 4.6
2 / 50	10 / 3.0	13 / 4.0	15 / 4.6	6.6 / 2.0	13 / 4.0	15 / 4.6	15 / 4.6
2½ / 65	11 / 3.4	15 / 4.6	15 / 4.6	6.6 / 2.0	14 / 4.3	17 / 5.2	15 / 4.6
3 / 80	12 / 3.7	16 / 4.9	15 / 4.6	6.6 / 2.0	15 / 4.6	19 / 5.8	15 / 4.6
4 / 100	14 / 4.3	18 / 5.5	15 / 4.6	6.6 / 2.0	17 / 5.2	21 / 6.4	15 / 4.6
5 / 125	16 / 4.9	20 / 6.1	15 / 4.6	6.6 / 2.0	20 / 6.1	24 / 7.3	15 / 4.6
6 / 150	17 / 5.2	21 / 6.4	15 / 4.6	10 / 3.0	21 / 6.4	26 / 7.9	15 / 4.6

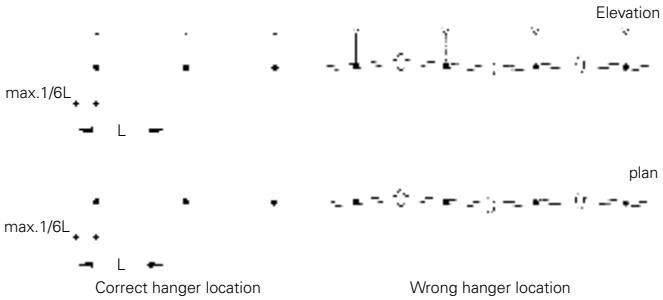
18 / 450	27 / 8.2	27 / 8.2	15 / 4.6		35 / 10.7	43 / 13.1	15 / 4.6
20 / 500	30 / 9.1	27 / 8.2	15 / 4.6		39 / 11.9	46 / 14.0	15 / 4.6
24 / 600	32 / 9.8	26 / 7.9	15 / 4.6		42 / 12.8	50 / 15.2	15 / 4.6

1) ANSI B31.1 Power Piping Code
2) ANSI B31.9 Building Services Piping Code
3) NFPA 13 Sprinkler systems
4) Ministry of Land & Transportation of Japan: Mechanical Equipment Construction Guide

Hanger locations on straight runs where flexible couplings are used

When flexible couplings are used on straight runs, location of hangers shall be designed as close to each coupling as possible, or within a distance of less than 1/6 the span.

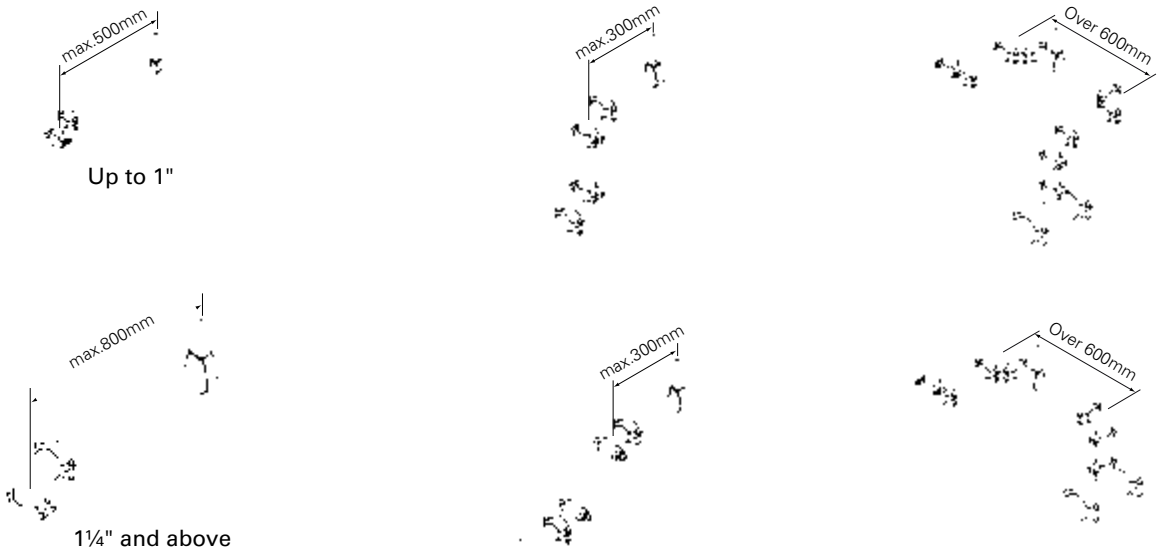


Correct hanger location

Wrong hanger location

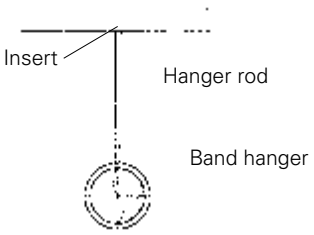
Hanger locations on curved pipe runs and branch lines

Additional hangers or supports shall be provided where runs are curved, connected to a branch line or on short risers or drops.

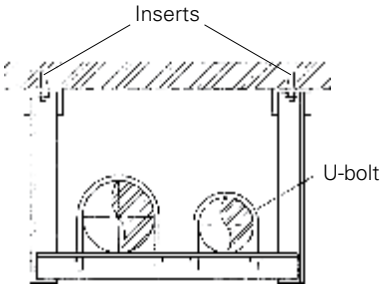


Typical designs of hangers and sway braces for pipe runs

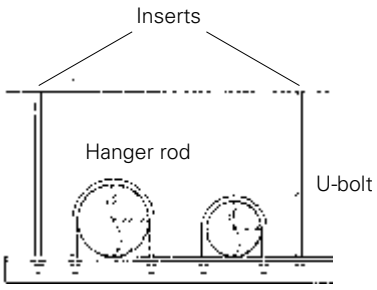
Pipe runs shall be adequately suspended by rod hangers or steel angles that are directly attached to the building structure to restrict the movement of the piping. Hangers and their components shall be ferrous. The maximum distance between hangers shall not exceed that specified in the table of previous page.



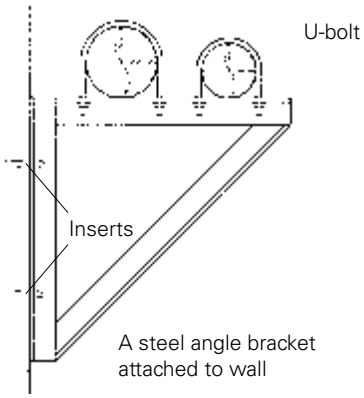
A rod hanger for a single pipe run



A trapeze hanger suspended from ceiling



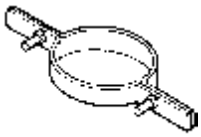
A trapeze hanger for multiple pipe runs



A steel angle bracket attached to wall

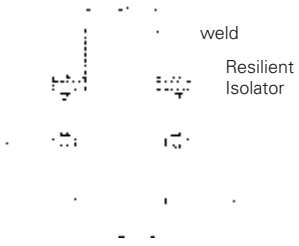
Supports for risers

In multi-story buildings, risers shall be fixed (or anchored) at the lowest level and at the top of the riser and shall be supported by riser clamps or U-bolts at each floor level to prevent the risers from swaying. If risers are braced by the penetration floors, the number of riser clamps or U-bolts may be reduced to one at each three stories. For risers, either flexible or rigid couplings can be used as long as proper anchoring and support is provided.

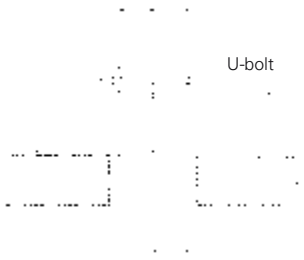


Riser clamp

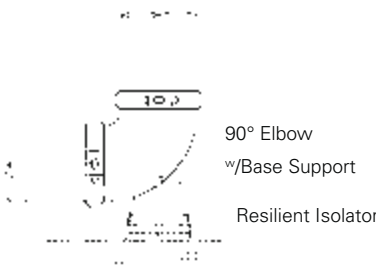
Anchors for risers (⊣▶◀⊢)



Sway braces for risers (⊣╫⊢)

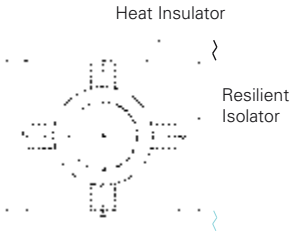


Anchor (⊣▶◀⊢)



Sway brace (⊣╫⊢)

Sway brace (⊣╫⊢)



- Anchors should be sufficient to hold the weight of water-filled pipe and pressure thrusts.
- Pipe guides (sway braces) should be such as to brace lateral movement of the system.

Gasket Selection Guide

Over the past 50 years great advances have been made in synthetic elastomer technologies, allowing us to offer a full range of gasket materials for a wide variety of piping applications. **Shurjoint** utilizes the finest materials available in our gaskets which are engineered and designed to meet and exceed industry standards such as ASTM D2000, AWWA C606, NSF61, IAPMO, etc. Our continual research, development and testing all serve to advance this field and to develop new and superior solutions for our changing industry. Selecting the proper gasket for the intended service application requires careful consideration of many factors to assure maximum gasket life. Those factors include temperature, fluid media and concentration, and continuity of service. The gaskets color coding helps to identify the gasket grade and compound.

Gasket Grade Index

Compound	Grade	Color Code	General Service Recommendations	Maximum Temp. Range
EPDM	E	Green Stripe	Good for cold & hot water up to +230°F (+110°C). Also good for services for water with acid, water with chlorine, deionized water, seawater and waste water, dilute acids, oil-free air and many chemicals. Not recommended for petroleum oils, mineral oils, solvents and aromatic hydrocarbons.	-30°F (-34°C) to +230°F (+110°C)
Nitrile	T	Orange Stripe	Good for petroleum oils, mineral oils, vegetable oils, non-aromatic hydrocarbons, many acids and water +150°F (+65°C).	-20°F (-29°C) to +180°F (+82°C)
EPDM	E-pw	Double Green Stripe	Specially compounded for cold +86°F (+30°C) and hot +180°F (+82°C) potable water services. The compound is UL classified per NSF/ANSI 61 & NSF/ANSI 372.	≤+180°F (+82°C)
EPDM	Lube-E	Violet Stripe	UL approved pre-lubricated gasket designed specifically only for the fire protection industry.	-30°F (-34°C) to +150°F (+65°C)
White Nitrile	A	White Gasket	Good for oily and greasy food products and processing, as well as pharmaceutical and cosmetics manufacturing. Compounded from FDA approved ingredients (CFR Title 21 Part 177.2600).	+20°F (-7°C) to +180°F (+82°C)
Silicone	L	Red Gasket	Good for dry, hot air without hydrocarbons and some high temperature chemical services. May also be used for fire protection dry systems.	-30°F (-34°C) to +350°F (+177°C)
Neoprene	V	Yellow Stripe	Good for hot lubricating oils and certain chemicals.	-30°F (-34°C) to +180°F (+82°C)
Fluoro-elastomer	O	Blue Stripe	Good for many oxidizing acids, petroleum oils, halogenated hydrocarbons, lubricants, hydraulic fluids, organic liquids and air with hydrocarbons to +300°F (+149°C).	+20°F (-7°C) to +300°F (+149°C)
Epichloro-hydrin	M2	White Stripe	Good for aromatic fuels at low temperatures and also for ambient temperature water.	-40°F (-40°C) to +160°F (+71°C)

Special Gaskets for AWWA ductile iron pipe

Compound	Grade	Color Code	General Service Recommendations	Maximum Temp. Range
Nitrile	S	Red Stripe	Specially compounded for use with AWWA ductile iron pipe and used for petroleum products, mineral oils, vegetable oils and air with oil vapors.	-20°F (-29°C) to +180°F (+82°C)
Haloganated Butyl	M	Brown Stripe	Good for water services, mild dilute acids, oil-free air and many chemicals. The compound is UL classified per NSF/ANSI 61 & NSF/ANSI 372.(AWWA ductile iron pipe use)	-20°F (-29°C) to +200°F (+93°C)

Please note that EPDM grade "EH" gaskets can be used for all applications and services that EPDM grade "E" gaskets are suitable for.

WARNING !

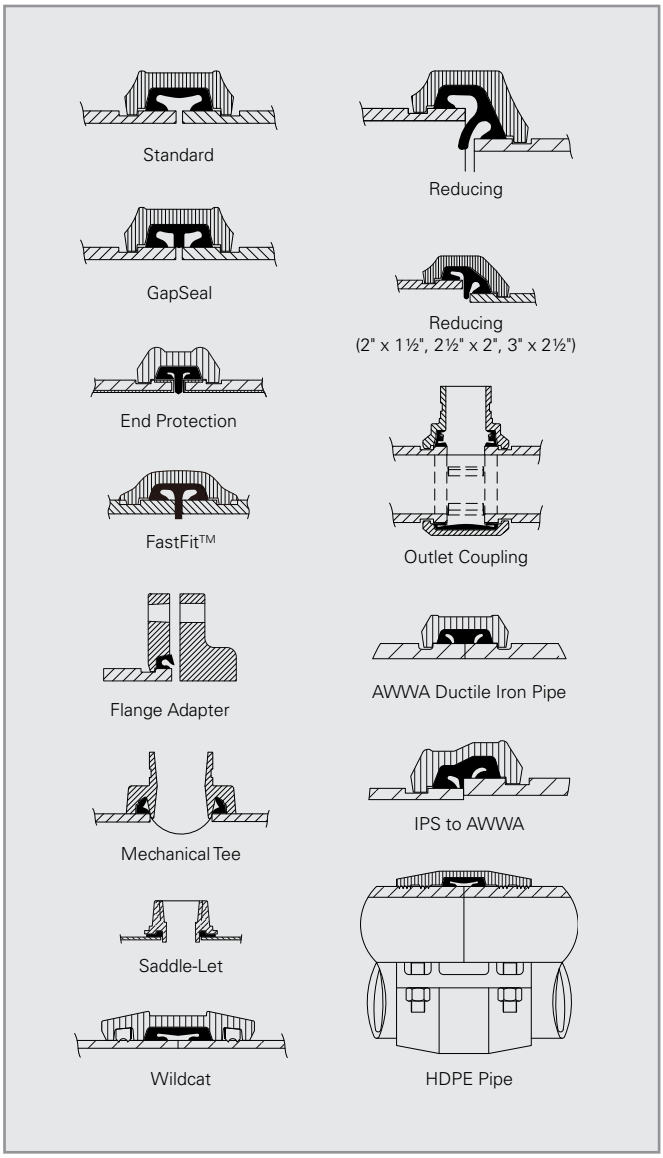
EPDM gaskets for water services are not recommended for steam services unless couplings or components are accessible for frequent gasket replacement.

Failure to select the proper gasket and compound may result in joint leakage or failure resulting in personal and or property damage. Gaskets should never be exposed to temperatures outside their ratings.

Gasket Selection Guide

*Proper gasket selection is essential for the optimum performance of **Shurjoint** grooved couplings, flange adapters and mechanical tees.*

1. Gasket styles: **Shurjoint** grooved couplings utilize several different gasket styles, standard, GapSeal, EP (End Protection) and FF (Fast Fit). GapSeal gaskets are compatible with standard gaskets and they are interchangeable with each other. Other special styles are not compatible with standard or GapSeal gaskets. Always use the correct gasket style for the coupling model you selected.



2. Vacuum service: **Shurjoint** standard gaskets are designed to seal well under vacuum conditions up to 10 inHg (absolute)/ 254 mmHg (absolute) which may occur when a system is drained. For continuous services greater than 10 inHg (absolute)/254 mmHg (absolute), the use of GapSeal gaskets or EP (End Protection) gaskets in combination with rigid style couplings is recommended. Contact **Shurjoint** for specific recommendations.

3. Dry pipe and freezer services: **Shurjoint** recommends the use of GapSeal Grade "E" gaskets for dry pipe fire protection systems and freezer applications. The GapSeal gasket closes off the gap between the pipes or gasket cavity. This will prevent any remaining liquid from entering the cavities and freezing when the temperature drops. Rigid couplings are preferred for dry pipe, freezer and vacuum applications. Reducing couplings are not recommended for these applications.

NOTE: Do not use the **Shurjoint** standard Lubricant for dry pipe and freezer systems, instead use a petroleum free silicone based lubricant.

4. NSF/ANSI 61 Standard: NSF/ANSI 61 classified gaskets are good for potable water services. The classification categories are 'cold' which is limited to +86°F (+30°C) (or maximum ambient distribution temperatures of unheated water) maximum and 'hot' which is limited to +180°F (+82°C) (or scalding temperatures of hot domestic water).

5. NSF/ANSI 372 Standard: Maximum Lead Content (formerly Annex G): Product complies with NSF/ ANSI 372 and conforms with lead content requirements for "lead free" plumbing as defined by California, Vermont, Maryland and Louisiana State laws and the U. S. Safe Drinking Water Act in effect as of Jan. 4, 2014.

6. Lubricant: **Shurjoint** Lubricant is recommended for proper gasket installation to prevent the gasket from being pinched. Apply a thin coat to the gasket exterior, gasket lips and/or housing interiors. **Shurjoint** Lubricant is available in one pound (450 grams) and one quart (2 pounds or 900 grams) containers. Certified to NSF/ANSI 61.

General Gasket Service Recommendations

The following are general service recommendations only and the information provided is based on the best information available from various resources including elastomer manufacturers, leading rubber molders, industry publications and our own laboratory testing and field experience. The information contained herein shall be considered for evaluation purposes and not as a guarantee. When and wherever possible, gasket materials should be tested with simulated service conditions to determine suitability for the intended service application. Unless otherwise noted, the recommendations are based on ambient temperatures. These recommendations do not apply to rubber lined products or rubber sealed valves. If more than one gasket grade is listed the preferred grade is listed first for general services. For chemicals not listed, a combination of chemicals listed or not, service temperatures not listed or borderline services, contact a **Shurjoint** Engineering Representative for a recommendation.

Fire Protection Services

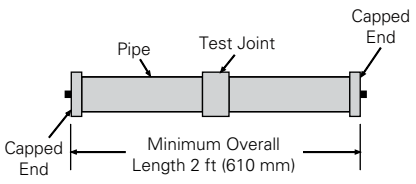
*The **Shurjoint** fire protection series numbers over 600 individual components, including grooved couplings, fittings, flanges, mechanical tees, valves, welding outlets, threaded fittings and more. Applicable products are listed and or approved by various domestic and international approval bodies including UL, FM, VdS, LPCB and others.*

Hydrostatic Tests Approved products are rated in cold water pressure (CWP) tested with a 3 to 5 times test pressure depending on the approval body and pipe size. The minimum working pressure (CWP) shall be 175 psi (12.3 Bar) in accordance with NFPA 13. Approval testing of a coupling is conducted on all different pipe schedules as enrolled and approved working pressures (CWP) are assigned to each individual combination of the coupling and test pipe. Refer to the Approved Pressure Ratings by UL and FM.

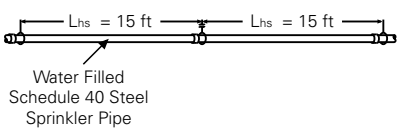
Hydrostatic Test Pressures
(= multiple of CWP)

Nom. Size	UL	FM	VdS	LPCB
Up to 6" / 150	X5	X4	X4	X4
8" – 12" / 200 -300	X4	X4	X4	X4
14" and above	X3	X4	NA	NA

Contact Shurjoint for other approvals.



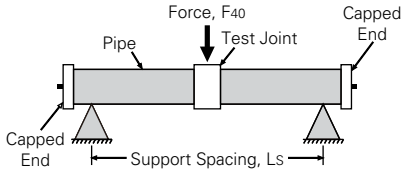
Bending Moment Tests The required bending moment per UL and FM is calculated based on twice the weight of water filled pipe over twice the maximum distance between pipe supports as specified in NFPA 13.



See the table below for the bending moments per UL and FM on Sch. 40 pipe. This bending moment is twice that required by ASTM F1476 (refer to page 15).

Required Bending Moment by UL & FM

Nom. Size (inches)	UL		FM	
	Moment Nm	Moment Lbs-Ft	Moment Nm	Moment Lbs-Ft
1½	1098	810	1100	810
2	1559	1150	1560	1150
2½	2400	1770	2400	1770
3	3289	2426	3290	2425
4	4942	3645	4975	3670
5	7102	5238	7105	5240
6	9606	7085	9615	7090
8	15326	11304	15335	11310
10	22757	16785	22790	16805
12	31116	22950	31145	22970
14	37217	27450		
16	48597	35843		



In addition to the hydrostatic and bending moment tests, couplings must meet other requirements including gasket performance tests.

Flexible Coupling NFPA 13 defines a flexible coupling as "a listed coupling or fitting that allows axial displacement, rotation, and at least 1 degree of angular movement of the pipe without inducing harm on the pipe. For pipe diameters of 8 in. and larger, the angular movement shall be permitted to be less than 1 degree but not less than 0.5 degrees." (NFPA 13 - 2007 3.5.4)

For sprinkler systems, NFPA 13 specifies the use of flexible couplings to protect the system against damage from earthquakes and lists some specific examples of how and where they should be used. Designers and installers should design their fire protection systems in compliance with this standard. See Typical Applications – Flexible Couplings on Page 191.

Minimum Pipe Schedules Standard cut and roll grooving connections have limitations of minimum pipe schedules. Special care is required for thin wall pipe. Factory Mutual Research Group (FM) outlines the minimum pipe schedules to be used for cut and roll grooving in their FM Class 1920 standard as follows:

Nominal Pipe Size, in.	Grooving Method	Minimum Pipe Schedule
6 or smaller	Cut	Schedule 40
8 or larger	Cut	Schedule 30
2 or smaller	Rolled	Schedule 5
6 or smaller	Rolled	Schedule 10, Thinwall, Lightwall
8 or larger	Rolled	0.188 in. (4.8 mm) wall

(FM Class 1920 -2007, Table 3.2.2)

Approved Pressure Ratings by UL & FM

1. Approved grooved couplings and fittings are good for use in both wet and dry sprinkler systems.
2. Typical applications of flexible couplings (models 7705, 7706 & 7707) are in sprinkler risers, in feed mains passing through walls from one building area to another, in locations subject to earthquakes, in the discharge line from aboveground pump suction tanks, in new connections to existing feed mains and in air or water fire service lines subject to excessive vibration or difficult alignment.
3. Approved grooved couplings are limited to use with rolled or cut-groove ended pipe, valves and fittings at a minimum rated working pressure of 175 psi (1205 kPa) and are suitable for aboveground service.
4. Grooves should be processed according to ANSI/AWWA C606 (latest edition) Grooved and Shouldered Joints.
5. Installation must be made according to the manufacturer's instructions and requirements.
6. Approved grooved couplings may be used in underground service subject to the installation restrictions placed upon the pipe and to the coupling manufacturer's recommendations and requirements.
7. Approved grooved couplings have been evaluated for a maximum ambient temperature of 225°F (107°C), suitable for normal warehouse protection.
8. Threaded size of sprinkler piping is limited to 1 inch (25 mm) nominal.
9. Threaded connections can be made to approved threadable thinwall pipe or to Schedule 40 pipe.

Source: FM Approval Guide

- For pressure ratings for special pipes, DIN and JIS pipe sizes, and large diameter sizes 14" – 24", contact Shurjoint for details.
- Models K-9 and 7771 rigid couplings are also available. For pressure ratings, contact Shurjoint for details.

Listed Pressure Ratings by IAPMO

The following tables show Shurjoint Couplings used on carbon steel, stainless steel pipe, and copper tubing; listed by IAPMO in accordance with CSA B242.

Model Z05 Rigid Coupling

Nom. Size	Pipe O.D.	Pressure Ratings	Min. Wall
in	in	PSI	Roll (mm)
mm	mm	Bar	Cut (mm)
1¼	1.660	350	1.7
32	42.2	24	3.6
1½	1.900	350	1.7
40	48.3	24	3.7
2	2.375	350	1.7
50	60.3	24	3.9
2½	2.875	350	2.1
65	73.0	24	4.8
3	3.500	350	2.1
80	88.9	24	4.8
4	4.500	350	2.1
100	114.3	24	5.2
5	5.563	350	2.8
125	141.3	24	5.2
6	6.625	350	2.8
150	168.3	24	5.6
8	8.625	350	2.8
200	219.1	24	6.1

Model Z07 Rigid Coupling

Nom. Size	Pipe O.D.	Pressure Ratings	Min. Wall
in	in	PSI	Roll (mm)
mm	mm	Bar	Cut (mm)
1¼	1.660	500	1.7
32	42.2	35	3.6

4	4.500x4.125	300	1.5
100	114.3x104.8	20	

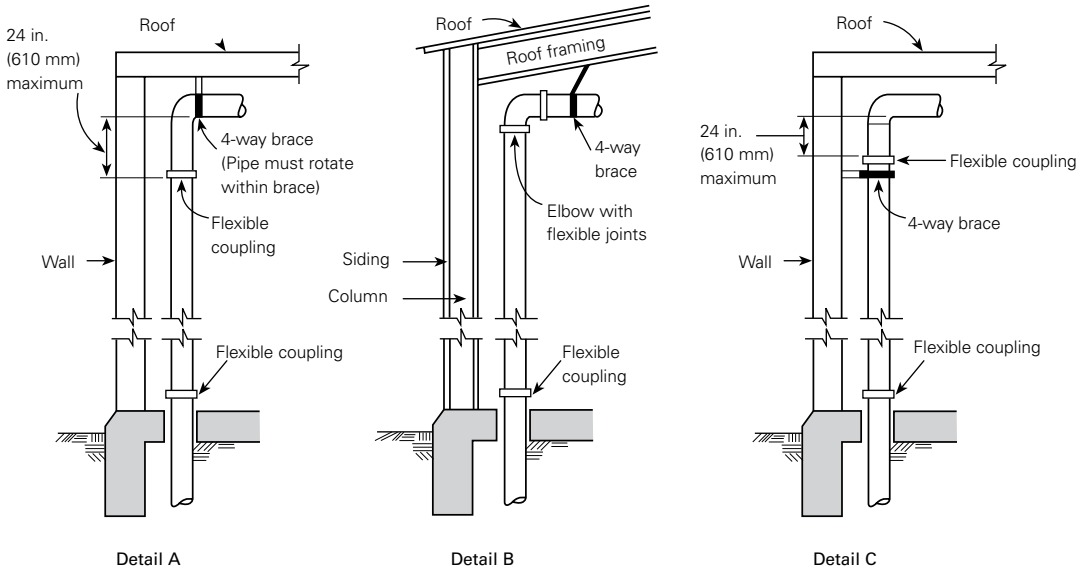
Note:

Minimum wall thickness listed corresponds to Table1 of ASME B36.10M Roll/Cut groove for carbon steel & stainless steel pipe end or Table 1 of ASTM B306 for copper tubing.

Typical Applications - Flexible Couplings – Sprinkler Systems (NFPA 13)

The following illustrations are part of NFPA 13 – 2013 Annex A Explanatory Material. These are for informational purposes only and not a mandatory requirement. For specific requirements for any other areas of sprinkler systems, refer to the latest version of NFPA 13.

1. Flexible couplings for main risers and branch line riser



Detail A | Detail B | Detail C

(Might be preferred for metal buildings)

Note to Detail A: The four-way brace should be attached above the upper flexible coupling re quired for the riser and preferably to the roof structure if suitable. The brace should not be attached directly to a plywood or metal deck.

FIGURE A.9.3.2(a) Riser Details.

2. Flexible couplings on horizontal portion of Tie-In

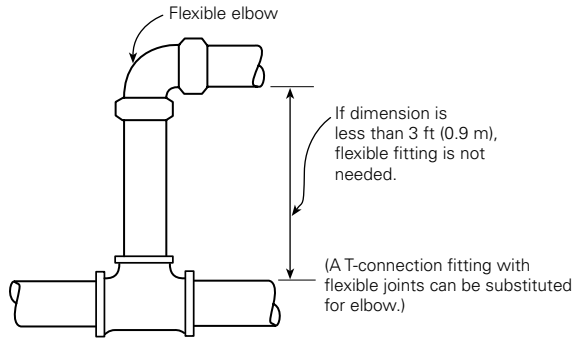


FIGURE A.9.3.2(b) Detail at Short Riser.

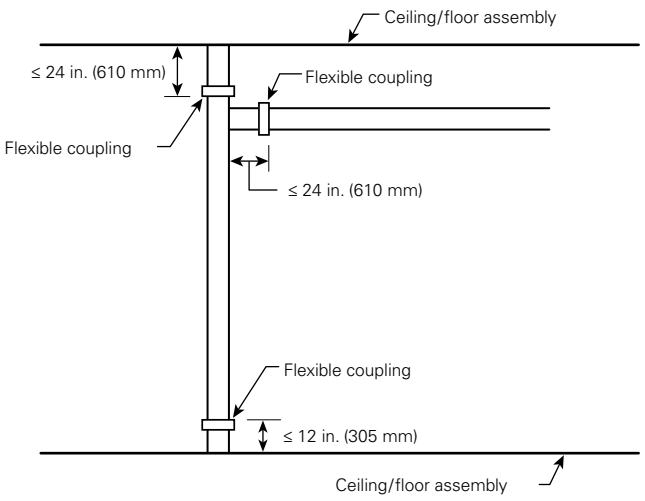

FIGUREA.9.3.2.3(2) Flexible Coupling on Horizontal Portionof Tie-In.

3. Flexible Coupling on Main Riser and Branch Line Riser

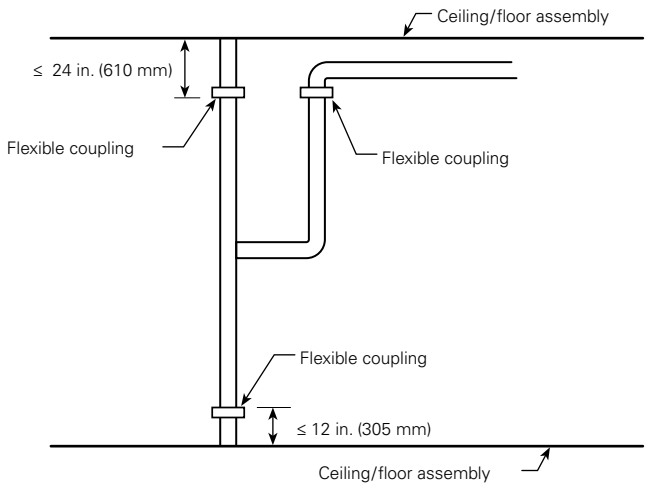

FIGURE A.9.3.2.3(2)(b) Flexible Coupling on Main Riser and Branch Line Riser.

4. Flexible couplings for drops

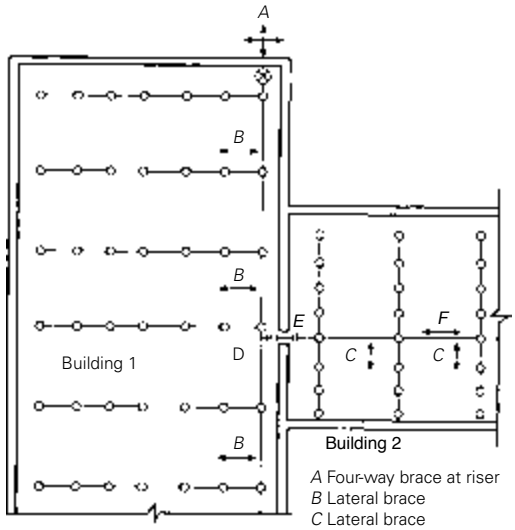
6. Earthquake protection for sprinkler piping



A Four-way brace at riser
B Lateral brace
C Lateral brace
D Short drop [Figure A.9.3.2(b)]
E Couplings at wall penetration
F Longitudinal brace

FIGURE A.9.3.5.9 (a)

7. Typical Location of Bracing on a Looped System

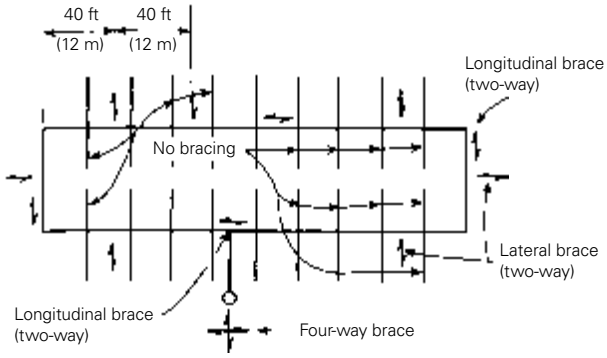


FIGURE A.9.3.5.6 (d)
Typical Location of Bracing on a Looped System.

Systems having more flexible couplings than required above shall be provided with additional sway bracing. A lateral brace shall be provided within 24" (600 mm) of every other coupling unless pipes are supported by rods less than 6" (152 mm) long from the ceiling or by U-type hooks underside of the structural element. (NFPA 13 – 2013 9.3.2. & 9.3.5.)
