The DLPM series automatic recirculation valve was developed for centrifugal pump protection, providing the following features and benefits.

OPERATIONAL DEPENDABILITY

The valve has only one moving part. No pilot valves or linkages are required for operation. The combination check valve/flow sensing element is guided at the top and bottom for smooth operation.

MULTI-FUNCTION VALVE

Provides economical and reliable protection against low flow and reverse flow conditions. The valve combines the functions of 1) main line check valve, 2) flow sensing element, 3) bypass flow control, 4) bypass pressure reduction. The DLPM eliminates at least seven separate components used in a conventional system.

SELF POWERED

The valve operates without air or electric power and is easily installed with three connections.

OPERATIONAL OVERVIEW

No main flow demand, minimum flow through bypass

Modulating flow, main flow is less than minimum flow

Main flow greater than minimum flow, bypass closed

INDUSTRIES:

The valve was developed to serve pump protection requirements of the following; Power, Refining, Chemical, Petro-chemical, Pharmaceutical, and HVAC.

INSTALLATIONS:

Typical installations include: Transfer, Feeding, Circulating, Boosting, and Loading Pumps.

USAGE:

Typical uses include centrifugal pumps of ANSI/API configuration, vertical turbine, and canned motor design.

APPLICATIONS:

In general any clean liquid which passes through a strainer or filter before entering the valve. Typical services include but are not limited to boiler feed water, raw water, condensate, gasoline, diesel fuel, light hydrocarbons, and feed stocks.

Normal Sizes Inch		Pressure Class LBS	Dimensions Inch			Weights Lbs

VALVE MODEL LEGEND

DLPM – Low pressure modulating automatic recirculation valve. 150 lb. and 300 lb. ANSI Class.

DMPM – Medium pressure modulating automatic recirculation valve. 600 lb. ANSI Class

BACK PRESSURE ACCESSORIES

Depending upon the bypass pressure differential, an orifice can be installed inside the bypass as illustrated above. In addition, a remote orifice or BPR (back pressure regulator) which is installed in the bypass piping may be required. HBE will quote and supply the necessary orifice or BPR with illustrative drawings and installation instructions to assure the valve operates quietly without two phase flow during bypass operation.

SIZE CODE	PRESSURE CLASS CODE	QUOTE/ORDER FILE NUMBER
04 = 1"	015 = 150	(xxxx)
06 = 1-1/2"	030 = 300	
08 = 2"	060 = 600	
12 = 3"		
16 = 4"		
24 = 6"		
32 = 8"		
40 = 10"		

EXAMPLE
 3" – 300 Lb. flanged valve
 File 4124
 Model DLPM-12-030-4124
 A written description of the material of construction details follows the model number.

How To Order and Specify

The centrifugal pump shall be protected by the DLPM series automatic recirculation valve which is completely self-contained and fully automatic via flow activation.

The valve protects the pump from reverse flow and prevents overheating during low process demands.

Operation of the valve bypass will be modulating so the sum of the main and bypass flow will never be less than the minimum flow requirement of the pump.

Valve design will incorporate a radial split body, spring assisted check valve disc and inline bypass. Materials of construction will consist of a cast carbon steel body ASTM A216 grade WCB with stainless steel internals. If service conditions dictate other materials are available such as stainless steel, low temperature steel and nickel alloys.

The valve will be designed to operate without flashing or cavitation occurring during bypass operation. Any necessary accessories such as orifices or back pressure regulators will be provided by HBE to prevent flashing or cavitation in the bypass piping.

Required Application Data

Main Flow

Minimum _____ GPM (m³/hr)
Maximum _____ GPM (m³/hr)
Normal _____ GPM (m³/hr)

Minimum Pump Flow _____ GPM (m³/hr)

Pump Discharge Pressure @:

Normal Flow _____ PSIG (kpa)
Bypass Flow _____ PSIG (kpa)
Shut off _____ PSIG (kpa)

Bypass Backpressure _____ PSIG (kpa)

Temperature

Normal _____ °F (°C)
Maximum _____ °F (°C)

Liquid

*Specific Gravity _____
*Vapor Pressure _____ psia
*Viscosity _____ centipoise
(*if other than water)
